UNIVERSITY PRESS

CONTENTS

<i>Preface</i>	vii
<i>Acknowledgements</i>	xi
1 Symmetries and invariances	1
1.1 Symmetry and invariance	1
1.2 Transformations and symmetries in quantum theory	2
1.3 Symmetries and conservation laws	6
1.4 Discrete transformations and inversions	9
1.5 Symmetry violations	12
2 Parity	15
2.1 Parity transformation	15
2.2 Parity symmetry	30
The determination of the neutral pion parity	36
2.3 Parity violation	42
Beta decay asymmetries from polarized nuclei	47
Longitudinal polarization of beta decay electrons	53
Beta decay asymmetries of free polarized neutrons	57
Muon decay asymmetries	59
Optical rotation of light	70
Inelastic electron scattering	74
Møller scattering	75
Parity-violating gamma decay asymmetry	80
Circular polarization of gamma decay radiation	83
3 Charge conjugation	88
3.1 Charge conjugation transformation	88
3.2 Charge conjugation symmetry	98
3.3 Charge conjugation violation	108
Charge conjugation tests in positronium decay	111
$\eta \rightarrow \pi^+ \pi^- \pi^0$ asymmetries	116

4	Time reversal	121
4.1	Time reversal transformation	121
4.2	Of phase factors	130
4.3	Time reversal symmetry	136
4.4	Time reversal violation	154
	Muon transverse polarization in semi-leptonic K decays	157
	Transverse polarization in beta decay	163
	Beam searches for neutron EDM	175
	ILL storage EDM experiment	179
	The muon EDM	185
5	CPT and spin statistics	195
5.1	CPT symmetry	195
5.2	Experimental tests of CPT	205
	Penning trap measurements	208
	Positronium decay correlation tests	215
5.3	Super-selection rules	218
5.4	Spin and statistics	221
	Search for antisymmetric two-photon states	227
6	CP symmetry	231
6.1	CP symmetry: found and lost	231
	The discovery of CP violation	240
	The proof of CP violation	245
6.2	Consequences of CP symmetry	250
6.3	CP violation signatures	260
	Hyperon decay asymmetry measurements	264
7	Flavoured neutral mesons	276
7.1	Flavoured neutral meson mixing	276
7.2	Flavoured neutral meson decays	292
7.3	Time evolution of flavour eigenstates	300
7.4	Asymmetries	309
7.5	Meson pairs	313
8	CP violation in the K system	322
8.1	Neutral kaons: generalities	322
8.2	Semi-leptonic decays	328
	Semi-leptonic charge asymmetries	332

8.3	Two-pion decays and direct CP violation	334
	Direct CP violation in neutral K decays	351
8.4	Time reversal violation	358
	T violation in neutral K mixing	359
8.5	CPT symmetry	362
8.6	Three-pion decays	370
8.7	Other decay modes	375
8.8	Coherent kaon pairs	377
8.9	C, P properties of CP violation	380
9	The link to theory	383
9.1	Early concepts	383
9.2	The Standard Model	385
9.3	From theory to measurements	399
9.4	From measurements to theory	411
9.5	Other scenarios	414
10	CP violation in heavy meson systems	419
10.1	Flavour mixing	419
10.2	D mesons	421
10.3	B mesons phenomenology	426
10.4	B meson experiments	435
	B -factory experiments	440
	Interference CP violation at B -factories	443
11	Widening the picture	455
11.1	Symmetries of gravity	455
11.2	The strong CP problem	459
11.3	The cosmic connection	460
11.4	Mirror matter	480
11.5	Macroscopic chirality	481
	Coda	483
	Appendix A Notation	485
	Appendix B Quantum field theory	487
B.1	Scalar fields	487
B.2	Fields with spin	490
B.3	Interactions	493

Appendix C Scattering in quantum theory	495
C.1 Scattering	495
C.2 Approximations	500
 Appendix D The Dalitz–Fabri plot	 503
 Appendix E Spin and polarization	 506
E.1 Polarization	506
E.2 Covariant polarization	508
E.3 Time evolution	511
E.4 Massless particles	512
 Appendix F Systematic errors	 514
F.1 Of errors, mistakes and experiments	514
F.2 Treatment of systematic errors	516
F.3 Of errors and cross checks	522
 Bibliography	 526
 List of Experiments	 545
 Index	 547
