UNIVERSITY PRESS

Contents

1 Quantum field theory and the renormalization group	1
1.1 Quantum electrodynamics: A quantum field theory	3
1.2 Quantum electrodynamics: The problem of infinities	4
1.3 Renormalization	7
1.4 Quantum field theory and the renormalization group	9
1.5 A triumph of QFT: The Standard Model	10
1.6 Critical phenomena: Other infinities	12
1.7 Kadanoff and Wilson's renormalization group	14
1.8 Effective quantum field theories	16
2 Gaussian expectation values. Steepest descent method	19
2.1 Generating functions	19
2.2 Gaussian expectation values. Wick's theorem	20
2.3 Perturbed Gaussian measure. Connected contributions	24
2.4 Feynman diagrams. Connected contributions	25
2.5 Expectation values. Generating function. Cumulants	28
2.6 Steepest descent method	31
2.7 Steepest descent method: Several variables, generating functions	37
Exercises	40
3 Universality and the continuum limit	45
3.1 Central limit theorem of probabilities	45
3.2 Universality and fixed points of transformations	54
3.3 Random walk and Brownian motion	59
3.4 Random walk: Additional remarks	71
3.5 Brownian motion and path integrals	72
Exercises	75
4 Classical statistical physics: One dimension	79
4.1 Nearest-neighbour interactions. Transfer matrix	80
4.2 Correlation functions	83
4.3 Thermodynamic limit	85
4.4 Connected functions and cluster properties	88
4.5 Statistical models: Simple examples	90
4.6 The Gaussian model	92

4.7 Gaussian model: The continuum limit	98
4.8 More general models: The continuum limit	102
Exercises	104
5 Continuum limit and path integrals	111
5.1 Gaussian path integrals	111
5.2 Gaussian correlations. Wick's theorem	118
5.3 Perturbed Gaussian measure	118
5.4 Perturbative calculations: Examples	120
Exercises	124
6 Ferromagnetic systems. Correlation functions	127
6.1 Ferromagnetic systems: Definition	127
6.2 Correlation functions. Fourier representation	133
6.3 Legendre transformation and vertex functions	137
6.4 Legendre transformation and steepest descent method	142
6.5 Two- and four-point vertex functions	143
Exercises	145
7 Phase transitions: Generalities and examples	147
7.1 Infinite temperature or independent spins	150
7.2 Phase transitions in infinite dimension	153
7.3 Universality in infinite space dimension	158
7.4 Transformations, fixed points and universality	161
7.5 Finite-range interactions in finite dimension	163
7.6 Ising model: Transfer matrix	166
7.7 Continuous symmetries and transfer matrix	171
7.8 Continuous symmetries and Goldstone modes	173
Exercises	175
8 Quasi-Gaussian approximation: Universality, critical dimension	179
8.1 Short-range two-spin interactions	181
8.2 The Gaussian model: Two-point function	183
8.3 Gaussian model and random walk	188
8.4 Gaussian model and field integral	190
8.5 Quasi-Gaussian approximation	194
8.6 The two-point function: Universality	196
8.7 Quasi-Gaussian approximation and Landau's theory	199
8.8 Continuous symmetries and Goldstone modes	200
8.9 Corrections to the quasi-Gaussian approximation	202
8.10 Mean-field approximation and corrections	207
8.11 Tricritical points	211
Exercises	212
9 Renormalization group: General formulation	217
9.1 Statistical field theory. Landau's Hamiltonian	218
9.2 Connected correlation functions. Vertex functions	220
9.3 Renormalization group: General idea	222
9.4 Hamiltonian flow: Fixed points, stability	226
9.5 The Gaussian fixed point	231

9.6 Eigen-perturbations: General analysis	234
9.7 A non-Gaussian fixed point: The ε -expansion	237
9.8 Eigenvalues and dimensions of local polynomials	241
10 Perturbative renormalization group: Explicit calculations	243
10.1 Critical Hamiltonian and perturbative expansion	243
10.2 Feynman diagrams at one-loop order	246
10.3 Fixed point and critical behaviour	248
10.4 Critical domain	254
10.5 Models with $O(N)$ orthogonal symmetry	258
10.6 Renormalization group near dimension 4	259
10.7 Universal quantities: Numerical results	262
11 Renormalization group: N-component fields	267
11.1 Renormalization group: General remarks	268
11.2 Gradient flow	269
11.3 Model with cubic anisotropy	272
11.4 Explicit general expressions: RG analysis	276
11.5 Exercise: General model with two parameters	281
Exercises	284
12 Statistical field theory: Perturbative expansion	285
12.1 Generating functionals	285
12.2 Gaussian field theory. Wick's theorem	287
12.3 Perturbative expansion	289
12.4 Loop expansion	296
12.5 Dimensional continuation and regularization	299
Exercises	306
13 The σ^4 field theory near dimension 4	307
13.1 Effective Hamiltonian. Renormalization	308
13.2 Renormalization group equations	313
13.3 Solution of RGE: The ε -expansion	316
13.4 Effective and renormalized interactions	323
13.5 The critical domain above T_c	324
14 The $O(N)$ symmetric $(\phi^2)^2$ field theory in the large N limit	329
14.1 Algebraic preliminaries	330
14.2 Integration over the field ϕ : The determinant	331
14.3 The limit $N \rightarrow \infty$: The critical domain	335
14.4 The $(\phi^2)^2$ field theory for $N \rightarrow \infty$	337
14.5 Singular part of the free energy and equation of state	340
14.6 The $\langle \lambda \lambda \rangle$ and $\langle \phi^2 \phi^2 \rangle$ two-point functions	343
14.7 Renormalization group and corrections to scaling	345
14.8 The $1/N$ expansion	348
14.9 The exponent η at order $1/N$	350
14.10 The non-linear σ -model	351
15 The non-linear σ-model	353
15.1 The non-linear σ -model on the lattice	353
15.2 Low-temperature expansion	355

15.3 Formal continuum limit	360
15.4 Regularization	361
15.5 Zero-momentum or IR divergences	362
15.6 Renormalization group	363
15.7 Solution of the RGE. Fixed points	368
15.8 Correlation functions: Scaling form	370
15.9 The critical domain: Critical exponents	372
15.10 Dimension 2	373
15.11 The $(\phi^2)^2$ field theory at low temperature	377
16 Functional renormalization group	381
16.1 Partial field integration and effective Hamiltonian	381
16.2 High-momentum mode integration and RGE	390
16.3 Perturbative solution: ϕ^4 theory	396
16.4 RGE: Standard form	399
16.5 Dimension 4	402
16.6 Fixed point: ϵ -expansion	409
16.7 Local stability of the fixed point	411
Appendix	417
A1 Technical results	417
A2 Fourier transformation: Decay and regularity	421
A3 Phase transitions: General remarks	426
A4 $1/N$ expansion: Calculations	431
A5 Functional renormalization group: Complements	433
Bibliography	441
Index	447
