Glossary of symbols	xiii
1 Introduction to neutron powder diffraction	1
1.1 What is neutron powder diffraction?	1
1.2 The role of neutron powder diffraction	2
1.3 Milestones in the development of neutron powder diffraction	3
2 Theory – the bare essentials	18
2.1 Neutrons for diffraction	18
2.2 Samples for diffraction – the structure of condensed matter	20
2.3 Neutron scattering by the sample	39
2.4 The powder diffraction pattern	49
3 Basic instrumentation and experimental techniques	65
3.1 Where to find neutron powder diffraction facilities	65
3.2 Constant wavelength neutron diffractometers	70
3.3 TOF neutron diffractometers	77
3.4 Comparison of CW and TOF diffractometers	80
3.5 Experiment design	80
3.6 Sample preparation	100
4 Elements of data analysis	106
4.1 Preliminaries	106
4.2 Visual inspection	109
4.3 Phase identification	113
4.4 Unit cell parameters	118

4.5	Peak shapes and widths	124
4.6	Whole pattern fitting	131
5	Crystal structures	134
5.1	Neutron powder diffraction and crystal structures	134
5.2	More crystallography – description of crystal structures	135
5.3	Reflection conditions and space group determination	146
5.4	Solving structures	150
5.5	Structure refinement – the Rietveld method	155
5.6	Le Bail extraction	177
5.7	Practical considerations in structure refinement	178
5.8	Structure solution and refinement – examples	182
6	<i>Ab initio</i> structure solution	192
6.1	Introduction	192
6.2	Unit cell determination (powder pattern indexing)	193
6.3	Intensity extraction	205
6.4	Structure solution	212
6.5	Advanced refinement techniques	232
6.6	Looking ahead	249
7	Magnetic structures	251
7.1	Introduction	251
7.2	Crystallography and symmetry of magnetic structures	252
7.3	Magnetic scattering and diffraction	260
7.4	Solving magnetic structures	267
7.5	Recent examples	273
8	Quantitative phase analysis	284
8.1	Introduction	284
8.2	Theory	285
8.3	Individual peak methods	287
8.4	Whole pattern analysis	292
8.5	Evaluation of the techniques	293
8.6	Practical examples	294
9	Microstructural data from powder patterns	308
9.1	Introduction	308
9.2	Particle size	309
9.3	Microstrains	330
9.4	Combined size and strain broadening	340

9.5	Chemical and physical gradients	346
9.6	Line defects – dislocation broadening	358
9.7	Plane defects and stacking disorder	368
9.8	Texture	374
10	Diffuse scattering – thermal, short-range order, gaseous, liquid, and amorphous scattering	381
10.1	Introduction	381
10.2	Thermal diffuse scattering	382
10.3	Short-range order scattering	385
10.4	Scattering from gases, liquids, and amorphous solids	395
11	Stress and elastic constants	403
11.1	Stresses, strains, and elastic constants in nature and industry	403
11.2	Influence of elastic strains on the powder diffraction pattern	414
11.3	Neutron diffraction residual stress analysis	420
11.4	Determination of single crystal elastic constants from polycrystalline samples	438
12	New directions	443
12.1	Introduction	443
12.2	Neutron sources	443
12.3	Components	444
12.4	Diffractometers	446
12.5	Data analysis	449
12.6	New problems for study by neutron powder diffraction	453
12.7	Closing remarks	458
	Appendix 1	459
	Appendix 2	462
	References	463
	Index	481
