Preface	v
1 Glassy dynamics of liquids—facets of the phenomenon	1
1.1 Stretching of the dynamics	1
1.2 Power-law relaxation	8
1.3 Superposition principles	15
1.4 Two-step relaxation through a plateau	21
1.5 The cage effect	24
1.6 Crossover phenomena	30
1.7 Hard-sphere systems: the paradigms	37
1.8 Hard-sphere systems with short-range attraction	44
2 Correlation functions	51
2.1 The evolution of dynamical variables	54
2.2 Correlation-function description of the dynamics	61
2.3 Spectral representations	66
2.4 Memory-kernel descriptions of correlators	72
2.4.1 Zwanzig–Mori equations	72
2.4.2 Models for correlation functions	78
2.5 Linear-response theory	82
2.6 The arrested parts of correlation functions	89
3 Elements of liquid dynamics	96
3.1 Preliminaries	96
3.1.1 Homogeneous isotropic systems without chirality	96
3.1.2 Densities and density fluctuations	100
3.2 Tagged-particle dynamics	107
3.2.1 Basic concepts and general equations	107
3.2.2 Tagged-particle diffusion	112
3.2.3 The friction coefficient	120
3.2.4 The cage effect and glassy-dynamics precursors of the velocity correlations	125
3.3 Densities and currents in simple liquids	132
3.3.1 Definitions and general equations	132
3.3.2 Transverse-current diffusion	142
3.3.3 The generalized-hydrodynamics description of transverse-current correlations	145
3.3.4 Visco-elastic features and glassy-dynamics precursors of the transverse-current correlators	149

3.3.5	Representations of the density correlators in terms of relaxation kernels	154
3.3.6	Sound waves and heat diffusion	161
3.3.7	Visco-elastic features and glassy-dynamics precursors of the density-fluctuation correlators	169
4	Foundations of the mode-coupling theory for the evolution of glassy dynamics in liquids	177
4.1	Self-consistent-current-relaxation approaches	178
4.1.1	The factorization ansatz	178
4.1.2	Self-consistency equations for density correlators	185
4.2	A mode-coupling theory	191
4.2.1	Equations of motion and fixed-point equations	191
4.2.2	Mode-coupling-theory models	196
4.2.3	The basic version of microscopic mode-coupling theories	204
4.2.4	An elementary mode-coupling-theory model	209
4.3	Glass-transition singularities	217
4.3.1	Regular and critical states	217
4.3.2	Examples for bifurcation diagrams	224
4.3.3	Classification of the critical states	235
4.3.4	Correlation arrest near A_2 singularities	242
4.3.5	Density-fluctuation arrest in hard-sphere-like systems	250
4.3.6	Arrest in systems with short-ranged-attraction	256
4.4	Dynamics near glass-transition singularities	267
4.4.1	Relaxation through plateaus	267
4.4.2	Below-plateau relaxation	281
4.4.3	Structure and structure relaxation	289
4.4.4	Descriptions of some glassy-dynamics data	292
5	Extensions of the mode-coupling theory for the evolution of glassy dynamics of liquids	304
5.1	Extensions of the MCT for simple systems	305
5.1.1	MCT equations for the glassy shear dynamics	305
5.1.2	Glassy-relaxation features of shear correlations	308
5.1.3	MCT equations for the tagged-particle dynamics	320
5.1.4	Idealized transitions from diffusion to localization	331
5.1.5	Glassy-dynamics features of tagged-particle motions	345
5.2	A mode-coupling theory for mixtures of spherical particles	356
5.2.1	The equations of motion	357
5.2.2	Density-fluctuation arrest	366
5.2.3	Hard-sphere mixtures	375
5.2.4	Sodium-disilicate melts	383

5.3	A mode-coupling theory for molecular liquids	386
5.3.1	A theory for interaction-site-density correlators	387
5.3.2	Systems of symmetric dumbbells	395
5.3.3	Glassy Rouse dynamics	427
5.4	Some addenda	432
6	Asymptotic relaxation laws	437
6.1	Dynamics of the first-scaling-law regime	438
6.1.1	Reformulation of the MCT equations of motion	438
6.1.2	The critical dynamics	443
6.1.3	Asymptotic description of the A_2 -bifurcation dynamics	470
6.1.4	The scaling-limit description of the generic liquid-glass-transition dynamics	492
6.1.5	Extended scaling-limit description of the generic A_2 -bifurcation dynamics	502
6.2	Dynamics of the second-scaling-law regime	513
6.2.1	Equations of motion for the second-scaling-law regime	514
6.2.2	The second-scaling-law description of the liquid dynamics	519
6.2.3	Asymptotic corrections for the second scaling limit	533
6.3	Relaxation near higher-order singularities	538
6.3.1	Correlation arrest near higher-order singularities	539
6.3.2	Logarithmic relaxation	553
A	Mathematical miscellanies	577
A.1	Laplace transforms	577
A.2	Fourier transforms	580
A.3	Positive-definite and positive-analytic functions	583
A.4	Harmonic-oscillator correlators	588
A.5	Matrix correlators	591
A.6	Product correlators	594
A.7	Power-law variations	596
A.8	Logarithmic variations	601
B	Symmetries of fluctuation correlators	603
C	Smoothened correlators	608
D	Theorems on MCT equations	611
D.1	Convergence of the approximant sequences	611
D.2	Completely monotonic approximants	613
D.3	The maximum-eigenvalue inequality	616
D.4	Further properties of stability matrices	618
	Bibliography	621
	Index	635
