Foreword	xi
1. Theory and Practice of Modulated Temperature Differential Scanning Calorimetry	1
<i>Andrew A. Lacey, Duncan M. Price, and Mike Reading</i>	
1 Introduction	1
2 The Basics of Modulated Temperature Differential Scanning Calorimetry	2
2.1 Some Preliminary Observations on Heat Capacity	2
2.2 The MTDSC Experiment and Deconvolution Procedure	4
2.2.1 The Simple Deconvolution Procedure	6
2.2.2 The Complete Deconvolution Procedure	9
2.2.3 Comments on the Different Deconvolution Procedures	10
2.2.4 Comments on Nomenclature	12
3 Practical Modulated Temperature DSC	13
3.1 The Importance of Linearity	13
3.2 Selection of Experimental Parameters	13
3.3 Common Transformations Studied by MTDSC	16
3.4 Chemical Reactions and Related Processes	16
3.4.1 Characteristics of MTDSC Results for Chemical Reactions and Related Processes	16
3.4.2 Summary	22
3.5 The Glass Transition	23
3.5.1 Characteristics of MTDSC Results for Glass Transitions	23

3.5.2 The Fictive Temperature and Enthalpy Loss on Annealing	34
3.5.3 Summary	37
3.6 Melting	38
3.6.1 Characteristics of MTDSC Results for Polymer Melting	38
3.6.2 The Measurement of Polymer Crystallinity	43
3.6.3 Summary	49
3.7 Calibration	50
3.7.1 Calibration of the Total and Reversing Signals	50
3.7.2 Comments on Methods of Phase Lag Correction	52
3.8 Overview	54
4 Detailed Discussion of the Theory of MTDSC	55
4.1 Introduction	55
4.2 Modulation and Deconvolution	55
4.3 Chemical Reactions and Related Processes	56
4.4 Frequency Dependent Heat Capacity and the Glass Transition	61
4.5 Melting	66
4.6 Calibration	69
References	80
2. The Application of Modulated Temperature Differential Scanning Calorimetry for the Characterisation of Curing Systems	83
<i>Bruno Van Mele, Hubert Rahier, Guy Van Assche, and Steven Swier</i>	
1 Introduction	83
2 Polymer Networks and General Nature of Curing	85
2.1 General Aspects of Polymer Network Formation	85
2.2 Cure Reaction Mechanism	87
2.2.1 Step-Growth Polymerisation	88
2.2.2 Chain-Growth Polymerisation without Termination	89
2.2.3 Chain-Growth Polymerisation with Termination	90
2.2.4 Heterogeneous Polymerisation	91
2.3 Mechanistic Versus Empirical Cure Rate Law	91
2.4 Specific Versus Overall Diffusion Control	93
2.5 Glass Transition–Conversion Relationship	94
3 Experimental Procedures to Monitor the Cure Process	94
3.1 Gelation	94
3.2 Vitrification and the Glass Transition	95
3.3 Conversion and Conversion Rate	96
3.4 Diffusion Effects During Cure	97

4	Procedures for MTDSC Cure Measurements	98
4.1	General Considerations for Accurate Kinetic Analysis	98
4.1.1	Sample Preparation, Sample Size and Storage	98
4.1.2	Case of Volatile Reaction Products	99
4.1.3	(Quasi-)isothermal MTDSC Cure Experiments	99
4.1.4	Isothermal or Non-Isothermal Data for Kinetic Analysis?	99
4.1.5	Baseline for Isothermal and Non-Isothermal MTDSC Cure	100
4.1.6	Total Reaction Enthalpy	100
4.2	MTDSC Parameters	101
4.2.1	Modulation Amplitude	101
4.2.2	Modulation Period	101
4.2.3	Temperature-Dependent Heat Capacity Calibration	102
5	MTDSC Characterisation of Cure: Experimental Observations	102
5.1	Experimental Systems	102
5.1.1	Epoxy Systems	102
5.1.2	Polyester–Styrene Systems	103
5.1.3	Melamine–Formaldehyde Resins	103
5.1.4	Inorganic Polymer Glasses	103
5.2	Remarks Concerning MTDSC Signals	103
5.2.1	Non-Reversing MTDSC Heat Flow Versus Conventional DSC Heat Flow	103
5.2.2	Heat Flow Phase	105
5.3	Isothermal Cure with Vitrification	105
5.3.1	Epoxy Systems	105
5.3.2	Unsaturated Polyesters	106
5.3.3	Melamine–Formaldehyde Resins	109
	Experimental Requirements and Reproducibility of Condensation Reactions	109
	Vitrification During MF Cure	110
5.3.4	Inorganic Polymer Glasses	111
5.4	Non-Isothermal Cure with Vitrification and Devitrification	112
5.4.1	Epoxy–Anhydride	112
5.4.2	Epoxy–Amine	114
5.4.3	Effect of Heating Rate	115
5.5	Combined Cure Paths	116
5.6	Slow Isothermal Cure	118
5.6.1	Unsaturated Polyesters	118
5.6.2	Inorganic Polymer Glasses: Influence of Particle Size	118

5.7	Partial Vitrification	121
5.8	Mobility Factor to Quantify Degree of Vitrification	123
5.9	Heat Capacity Change as a Result of Reaction Before Vitrification	124
5.9.1	Mechanistic Information	124
5.9.2	Step-Growth Epoxy–Amine Polymerisation: Primary and Secondary Reactions	125
5.10	Reaction-Induced Phase Separation	127
6	Modelling the Diffusion-Controlled Overall Kinetics and Cure Rate Law of Epoxy Systems	129
6.1	Proposed Model	129
6.2	Optimised Cure Rate Law	133
6.2.1	Epoxy–Anhydride System	134
6.2.2	Epoxy–Amine System	137
6.3	Remarks Concerning the Proposed Model and Literature Models	139
6.4	Remarks Concerning the Frequency Dependence of Heat Capacity During Cure	140
7	Glass Transition–Conversion Relationship	142
7.1	Validation of the $T_g - x$ Model	142
7.2	ΔC_p and ΔT_g at T_g as a Function of Conversion	144
8	TTT and CHT Cure Diagrams	145
8.1	MTDSC Calculation Procedure	145
8.2	Influence of Chemical Structure on the (De)vitrification Behaviour of the Thermosetting Systems	153
9	Conclusions and Future Developments	154
	References	156
3.	Applications of Modulated Temperature Differential Scanning Calorimetry to Polymer Blends and Related Systems	161
	<i>Douglas J. Hourston and Mo Song</i>	
1	Introduction	161
2	Heat Capacity and its Differential with Temperature Signal Over the Glass Transition Region	165
3	Measurements of the Glass Transition Temperature and Increment of Heat Capacity	166
4	Multi-Component Polymer Materials	173
4.1	Improvement in the Measurement of Polymer–Polymer Miscibility	173
4.2	Interface Development Between Compatible Polymer Films	183

4.2.1 Asymmetrical Interdiffusion: Polyepichlorohydrin/Poly(vinyl acetate)	186
4.2.2 Symmetrical Interdiffusion: Poly(methyl acrylate)/Poly(vinyl acetate)	190
4.3 Structured Latex Films	195
4.4 Morphology Analysis of Interpenetrating Polymer Networks	203
4.4.1 Characterisation of Glass Transition Behaviour in Interpenetrating Polymer Networks	204
4.4.2 Model Experiment	207
4.4.3 Analysis of Phase Structure of IPNs	209
5 Conclusions	211
References	212
4. The Application of MTDSC to Polymer Melting <i>Bernhard Wunderlich</i>	217
1 Introduction	217
2 The Melting and Crystallisation Behaviour of Polymers	219
2.1 Equilibrium Melting	219
2.2 Nucleation of Crystals and Molecules	224
2.3 Irreversible Melting	227
2.4 Local Equilibria	233
2.5 Summary of Thermal Effects	235
3 Instrument and Deconvolution Problems	237
3.1 Evaluation of Heat Capacity by MTDSC as a Baseline for the Study of Melting	237
3.2 Melting and Crystallisation by Standard DSC	245
3.3 Types of Modulation of Temperature	250
3.4 Deconvolution of the Reversing Heat Capacity	252
4 Applications of MTDSC to Polymer Melting	258
4.1 Qualitative and Semi-quantitative Analysis of Polymer Melting by MTDSC	258
4.1.1 Summary	268
4.2 Determination of Heat Capacity of Solids and Melts	269
4.2.1 Summary	274
4.3 Determination of Heat of Fusion, Crystallinity and Kinetics	275
4.3.1 Heat of Fusion and Crystallinity	275
4.3.2 Baseline Fits	276
4.3.3 Quasi-Isothermal Kinetics of the Glass Transition	276
4.3.4 Model Calculation for the Glass Transition with an Underlying Heating Rate	281

4.3.5 Kinetics of Transitions with a Latent Heat	285
4.3.6 Mesophase Transitions	289
4.3.7 Analysis by MTDSC Kinetics of Transitions with a Latent Heat	290
4.3.8 Summary	293
4.4 Determination of Annealing and Reorganisation	294
4.4.1 Annealing of PET	295
4.4.2 Annealing of PTT	297
4.4.3 Annealing and Reversible Recrystallisation in Low Molar Mass PEO	299
4.4.4 Annealing in PEcoO	304
4.4.5 Summary	308
4.5 Reversible Melting	309
4.5.1 Summary	313
5 Recommendations	314
Acknowledgements	316
References	316
Index	321
