Contents

Illustrations ix
Author’s preface xi
Acknowledgments xv

Part 1: The likelihood of extraterrestrial intelligence 1
1. Vast distances and long travel times 3
2. Stars, their evolution and types 9
3. Planets and our Sun 19
4. The many constraints on life 25
5. Why would anyone transmit to us? 33
6. The Drake Equation and habitable planets 41

Part 2: The basics of space communication 57
7. Where to look in the electromagnetic spectrum? 59
8. Receiver basics and how big is big? 71
9. Noise and limitations on sensitivity 81

Part 3: Programs in SETI 93
10. A brief history of SETI 95
11. Radio-frequency and microwave SETI, including the Allen Telescope Array 99
12. Early optical SETI and the all-sky Harvard system 109

Part 4: Possibilities in SETI 125
13. The PhotonStar project 127
14. Key issues for SETI 135
15. Other parts of the spectrum, decoding the data and forming pictures 143
16. Future systems for intercepting alien lasers 153
