TABLE OF CONTENTS

Mathematics and mechanics of granular materials by J.M. Hill and A.P.S. Selvadurai	1–9
The incremental response of soils. An investigation using a discrete-element model by F. Alonso-Marroquín and H.J. Herrmann	11–34
Initial response of a micro-polar hypoplastic material under plane shearing by E. Bauer	35–51
Some theoretical results about second-order work, uniqueness, existence and controllability independent of the constitutive equation by R. Chambon	53–61
Perturbation solutions for flow through symmetrical hoppers with inserts and asymmetrical wedge hoppers by G.M. Cox, S.W. McCue, N. Thamwattana and J.M. Hill	63–91
Micromechanical constitutive modelling of granular media: evolution and loss of contact in particle clusters by B.S. Gardiner and A. Tordesillas	93–106
A hyperbolic well-posed model for the flow of granular materials by D. Harris and E.F. Grekova	107–135
Towards a theory of granular plasticity by S.C. Hendy	137–146
Formulation of non-standard dissipative behavior of geomaterials by M. Hjiiaj, W. Huang, K. Krabbenhøft and S.W. Sloan	147–165
Bifurcation analysis for shear localization in non-polar and micro-polar hypoplastic continua W. Huang, M. Hjiiaj and S.W. Sloan	167–184
Large-strain dynamic cavity expansion in a granular material by V.A. Osinov	185–198
Generalised homogenisation procedures for granular materials by E. Pasternak and H.-B. Mühlhaus	199–229
Some fundamental aspects of the continuumization problem in granular media by J.F. Peters	231–250

Compression and shear of a layer of granular material by A.J.M. Spencer	251–264
An assessment of plasticity theories for modeling the incrementally nonlinear behavior of granular soils by C. Tamagnini, F. Calvetti and G. Viggiani	265–291
Incompressible granular flow from wedge-shaped hoppers by G.J. Weir	293–305
Micromechanic modeling and analysis of unsteady-state granular flow in a cylindrical hopper by H.P. Zhu and A.B. Yu	307–320
