Contents

1	Introduction and State-of-the-Art	
	F. Rustichelli, J.J. Skrzypek	1
1.1	Innovative Materials at Different Scales	1
1.2	Improved Physical Properties and Material Functionality at Atomic Scales and Nanoscales	4
1.2.1	Intermetallics	4
1.2.2	Nanomaterials and Nanocomposites	4
1.2.3	Nanomaterials and Nanocomposites for Bioapplications and Medical Applications	9
1.3	Improved Material Functionality at the Microscale or Mesoscale	10
1.3.1	Metal Matrix Composites MMC	10
1.3.2	Ceramic Matrix Composites CMC	13
1.4	Multifunctional Structures at the Macrolevel	14
1.4.1	Functionally Graded Coatings (FGC) for Thermal (TBC), Wear (WBC), and Oxidation (OBC) Barriers	14
1.4.2	Fracture Resistance of FGM and TBCs	15
2	X-ray and Neutron Scattering	
	F. Fiori, F. Spinozzi	17
2.1	Unperturbed Beams	17
2.2	Interactions	19
2.2.1	X-rays	19
2.2.2	Neutrons	25
2.3	Introduction to Crystallography	29
2.3.1	Monodimensional Array of Atoms	29
2.3.2	Three-Dimensional Array of Atoms	30
2.3.3	The Reciprocal Lattice	31
2.3.4	Crystals	31
2.3.5	The Ideal Paracrystal	32
2.4	Introduction to Powder Diffraction	34
2.4.1	Bragg's Law	34

3	Microstructural Investigations by Small Angle Scattering of Neutrons and X-rays	
	F. Fiori, F. Spinozzi	35
3.1	Introduction	35
3.2	Theoretical Basis	35
3.2.1	Cross Sections	35
3.2.2	Two-Phase Model	36
3.2.3	Guinier's and Porod's Approximations	37
3.2.4	The Kratky Plot and Porod's Invariant	38
3.2.5	Non-diluted Systems	38
3.3	Experimental Methods	39
3.3.1	Experimental Set-Up	39
3.3.2	Data Analysis	40
3.3.3	Grazing Incidence Small-Angle X-ray Scattering (GISAXS)	41
3.4	A Classical Application	42
3.5	Applications to Innovative Materials	45
3.5.1	Carbon Nanotubes: Single-Walled and Multi-Walled Carbon Nanotubes	45
3.5.2	Nanocomposites	48
3.5.3	Materials for Fuel Cells	56
3.5.4	Biomaterials	63
3.5.5	Electronic Devices: Nanoline Gratings	67
3.5.6	Advanced Light Alloys	69
3.5.7	Applications of Grazing Incidence Small-Angle X-ray Scattering	73
4	Residual Stress Analysis by Neutron and X-ray Diffraction	
	G. Albertini, E. Girardin, A. Manescu	79
4.1	Residual Stress	79
4.1.1	Basis on Strain and Stress Evaluation by Using Neutron and X-ray Beams	81
4.1.2	Other Techniques of Strain and Stress Evaluation by Using Neutron and X-ray Diffraction	88
4.1.3	Experimental Facilities	91
4.2	Applications	91
4.2.1	Applications to Classic Materials	94
4.2.2	Applications to Innovative Materials	110
5	Three-Dimensional Imaging by Microtomography of X-ray Synchrotron Radiation and Neutrons	
	A. Giuliani, V. Komlev, F. Rustichelli	123
5.1	Introduction to Three-Dimensional Imaging by X-ray Synchrotron Radiation Microtomography	123

5.2	Application of X-ray Computed Microtomography for the Investigation of Metallic Foams, Composites, Biomaterials, Interfacial Properties, In-situ Transformation and Damage Evolution of Cracks	128
5.2.1	Foams for Advanced Technological Applications	129
5.2.2	Sintering Processes	134
5.2.3	Composite Materials	138
5.2.4	Biomaterials	141
5.2.5	Cell Tracking	150
5.2.6	Microstructural Investigations of Native Bone	151
5.2.7	Other Applications	156
5.3	Introduction to Three-Dimensional Imaging by Neutron Tomography	156
5.4	Application of Neutron Tomography for the Investigation of Fuel Cells, Foams for Advanced Technological Applications, Composites, Biomaterials and Historical Artefacts	161
5.4.1	Fuel Cells	161
5.4.2	Metallic Foams for Advanced Technological Applications	164
5.4.3	Composites	165
5.4.4	Biomaterials	167
5.4.5	Cultural Heritage Items	168
5.5	Other Tomographic Techniques	170
6	Constitutive Models for Analysis and Design of Multifunctional Technological Materials	
	A.W. Ganczarski, H. Egner, A. Muc, J.J. Skrzypek	179
6.1	Constitutive Material Modeling at the Nanoscale	179
6.1.1	Interatomic Potentials in CNTs	179
6.1.2	Numerical Modeling of CNTs	182
6.1.3	Numerical Results	184
6.2	Constitutive Modeling at Microscale and Macroscale	187
6.2.1	Anisotropic Elastic Material Models – Application to Composites	187
6.2.2	Elastic-Damage Material Models – Effective Elastic Stiffness or Compliance Matrices	194
6.2.3	Elastic-Plastic Material Models – Plastic Anisotropy and Plastic Hardening	196
6.2.4	Constitutive Equations of Plastic Hardening	202
6.2.5	Incremental Constitutive Equations of Elastoplasticity	206
6.3	Modeling Multidissipative Materials	209
6.3.1	Coupled Nonlinear Damage–Plasticity Model	209
6.3.2	Coupled Thermal Damage–Plasticity Model	214

7	Enhanced Numerical Tools for Computer Simulation of Coupled Physical Phenomena and Design of Components Made of Innovative Materials	
	M. Cegielski, S. Hernik, M. Kula, M. Oleksy	225
7.1	Application of the Concept of Continuous Damage Deactivation to Modeling of the Low Cycle Fatigue of Aluminum Alloy Al-2024	225
7.1.1	Experiment of Low Cycle Fatigue of Aluminum Alloy Al-2024	225
7.1.2	Effect of Continuous Damage Deactivation	226
7.1.3	Modeling of Damage Affected Plastic Flow	228
7.1.4	Results	229
7.2	Modeling the FGM A356R Brake Disk Against Global Thermoelastic Instability (Hot-Spot)	231
7.2.1	Preliminaries	231
7.2.2	Stability of a Brake Disk Made of Stainless Steel ASTM-321	233
7.2.3	Stability of a Brake Disk Made of Homogeneous A356R Composite	234
7.2.4	Stability of a Brake Disk Made of Functionally Graded Composite A356R	236
7.2.5	Advantages of Application of Functionally Graded Materials for the Design of Brake Disks Against Hot-Spots	238
7.2.6	Conclusions	238
7.3	Modeling Wear Resistance of a Piston Sleeve Made of MMC A356R	239
7.3.1	Model	239
7.3.2	Results	241
7.4	Finite Element Modeling of the CrN/FGM/W300 and CrN/Cr/W300 Architectures	242
7.4.1	Plies Problem Formulation and Materials	242
7.4.2	Finite Element Modeling	243
7.4.3	Loads and Boundary Conditions	243
7.4.4	Thermal Ratchetting	244
7.4.5	Architecture Dependent Results	244
7.4.6	Possible Extensions	245
7.5	Modelling of the ZrO ₂ /FGM/316L Screen Against Thermal Cycles	246
7.5.1	Introduction	246
7.5.2	Constitutive Equations of the Elastic-Plastic Damage Material Model	246
7.5.3	Model – Geometry and Boundary Conditions	249
7.5.4	Manufacturing Phase Analysis	251

7.5.5	Working Phase Analysis	253
7.5.6	Conclusions	254
