HANDBOOK OF APPLIED ANALYSIS

By

NIKOLAOS S. PAPAGEORGIOU

National Technical University, Athens, Greece

SOPHIA TH. KYRITSI-YIALLOUROU

Hellenic Naval Academy, Piraeus, Greece

Contents

Series Preface	ix
Preface	xi
1 Smooth and Nonsmooth Calculus	1
1.1 Gâteaux and Fréchet Derivatives	2
1.2 Convex Functions	12
1.3 Locally Lipschitz Functions	27
1.4 Variational Geometry	35
1.5 Γ -Convergence	45
1.6 Remarks	60
2 Extremal Problems and Optimal Control	63
2.1 Lower Semicontinuity	64
2.2 Constrained Minimization Problems	72
2.3 Saddle Points and Duality	79
2.4 Variational Principles	89
2.5 Calculus of Variations	98
2.6 Optimal Control	111
2.7 Remarks	144
3 Nonlinear Operators and Fixed Points	147
3.1 Compact and Fredholm Operators	148
3.2 Monotone and Accretive Operators	162
3.3 Degree Theory	196
3.4 Metric Fixed Points	224
3.5 Topological Fixed Points	237
3.6 Order and Fixed Points	245
3.7 Remarks	263

4	Critical Point Theory and Variational Methods	267
4.1	Critical Point Theory	268
4.2	Ljusternik–Schnirelmann Theory	289
4.3	Spectrum of the Laplacian and of the p -Laplacian	297
4.4	Abstract Eigenvalue Problems	334
4.5	Bifurcation Theory	340
4.6	Remarks	349
5	Boundary Value Problems–Hamiltonian Systems	351
5.1	Variational Method	352
5.2	Method of Upper–Lower Solutions	380
5.3	Degree-Theoretic Methods	404
5.4	Nonlinear Eigenvalue Problems	421
5.5	Maximum and Comparison Principles	432
5.6	Periodic Solutions for Hamiltonian Systems	440
5.7	Remarks	450
6	Multivalued Analysis	455
6.1	Continuity of Multifunctions	456
6.2	Measurability of Multifunctions	470
6.3	Continuous and Measurable Selectors	475
6.4	Decomposable Sets and Set-Valued Integration	487
6.5	Fixed Points and Carathéodory Multifunctions	504
6.6	Convergence of Sets	514
6.7	Remarks	524
7	Economic Equilibrium and Optimal Economic Planning ...	529
7.1	Perfectly Competitive Economies: Core and Walras Equilibria	530
7.2	Infinite Horizon Multisector Growth Models	542
7.3	Turnpike Theorems	558
7.4	Stochastic Growth Models	567
7.5	Continuous-Time Growth Models	589
7.6	Expected Utility Hypothesis	599
7.7	Remarks	606
8	Game Theory	609
8.1	Noncooperative Games–Nash Equilibrium	610
8.2	Cooperative Games	617
8.3	Cournot–Nash Equilibria for Random Games	624
8.4	Bayesian Games	628
8.5	Stochastic Games	632
8.6	Approximate Equilibria	644
8.7	Remarks	649

9	Uncertainty, Information, Decision Making	651
9.1	Mathematical Space of Information	652
9.2	The ex-Post View	662
9.3	The ex-ante View	668
9.4	Convergence of σ -Fields and Prediction Sequences	673
9.5	Games with Incomplete Information	680
9.6	Markov Decision Chains with Unbounded Costs	684
9.7	Remarks	689
10	Evolution Equations	691
10.1	Lebesgue–Bochner Spaces	692
10.2	Semilinear Evolution Equations	701
10.3	Nonlinear Evolution Equations	718
10.4	Second-Order Nonlinear Evolution Equations	740
10.5	Remarks	750
	References	753
	List of Symbols	781
	Index	783
