CONTENTS

1. Metals with strong disorder	1
1.1. Diffraction theory of electron transport in liquid metals	2
1.2. The Mooji rule	7
1.3. Saturation of resistivity	9
1.4. The Ioffe–Regel limit at high electron density	13
References	15
2. Quantum corrections to conductivity	16
2.1. Weak localization	17
2.2. Effect of magnetic field on weak localization	25
2.3. Antilocalization	28
2.4. Interelectron interference (Aronov–Altshuler effect)	35
References	41
3. Effect of the Coulomb interaction on the electron energy spectrum	43
3.1. The Peierls transition	43
3.2. Structure of the impurity band in the case of low doping	45
3.3. The Coulomb gap	52
References	57
4. Hopping conductivity	58
4.1. Localized states and transitions between these states	58
4.2. Nearest-neighbor hopping	61
4.3. Variable-range hopping	64
4.4. Experimental observation of hopping conductivity	67
References	73
5. Metal–Insulator transitions	74
5.1. The Anderson transition	75
5.2. The Landauer formula for one-dimensional (1D) systems	78
5.3. Localization and role of correlations in 1D systems	82
5.4. Microwave modelling	88
5.5. Model of structural disorder	91
5.6. The Mott transition	94
5.7. The minimum metal conductivity?	99
References	100
6. Scaling hypothesis	102
6.1. Foundations and formulation of the scaling hypothesis	102
6.2. Three-dimensional (3D) systems	107

6.3. Two-dimensional (2D) systems	114
6.4. Scaling and spin-orbit interaction	120
References	122
7. Chemical localization	123
7.1. Intermetallic compounds in two-component melts	124
7.2. Quasicrystals	130
7.3. Metal-insulator transition in systems with high electron density	136
References	138
8. Granular metals	139
8.1. Morphology and classification	139
8.2. Coulomb blockade and metal-insulator transition	144
8.3. Fractal granular metals	151
References	155
9. Integer quantum Hall effect	156
9.1. Spectrum and dynamics of two-dimensional electrons in strong magnetic fields	157
9.2. Experimental observation of integer quantum Hall effect	164
9.3. Mechanism of plateau formation	169
9.4. Edge channels	175
9.5. Density of states of 2D electron gas in a magnetic field	180
9.6. Chains of phase transitions	183
9.7. Two-parametric scaling	189
References	195
APPENDICES	197
A. Elements of percolation theory	199
A.1. Approximation of effective medium	199
A.2. Percolation thresholds	202
A.3. Region close to the percolation transition	206
A.4. Example: Electrical conductivity of a strongly inhomogeneous medium	208
References	211
B. Tunneling characteristics	212
Materials Index	223
Subject Index	224
