CONTENTS

Introduction	1
1 Experimental technique	5
1.1 Sources of high-power terahertz radiation	5
1.1.1 CO ₂ laser	7
1.1.2 Optically pumped terahertz molecular lasers	11
1.1.3 Tunable high-pressure TE-CO ₂ laser pumped terahertz molecular lasers	16
1.1.4 Free-electron lasers	21
1.1.5 Short coherent terahertz pulses	30
1.2 Optical components and methods in the THz range	34
1.2.1 Windows	34
1.2.2 Filters	40
1.2.3 Polarizers	55
1.2.4 Spectral analysis	60
1.2.5 Attenuators	62
1.2.6 Transmission through the atmosphere, liquid nitrogen, and liquid helium	63
1.3 Detection of pulsed terahertz radiation	64
1.3.1 Photon drag detectors	67
1.3.2 μ -photoconductivity detectors	69
1.3.3 Pyroelectric detectors	70
1.3.4 Atomic layer thermopile	72
1.3.5 New detection concepts	75
References	79
2 Tunneling in terahertz fields	93
2.1 Terahertz field induced tunneling	94
2.1.1 Ionization of deep impurities	94
2.1.2 Theory of tunneling ionization	98
2.1.3 Phonon-assisted tunneling ionization in the quasistatic limit	116
2.1.4 Tunneling ionization in the high-frequency limit	118
2.1.5 Transition to direct tunneling	121
2.1.6 Magnetic field effect on tunneling ionization	124
2.1.7 Tunneling ionization of charged impurities and the Poole–Frenkel effect	125
2.1.8 Terahertz tunneling as a method	127
2.2 Photon mediated tunneling in quantum wells	128

2.2.1	Resonant tunneling	130
2.2.2	Negative differential conductivity	133
2.3	Ponderomotive force stimulated tunneling	136
2.3.1	Radiation pressure enhanced tunneling	138
2.3.2	Tunneling enhancement in the near-zone field	145
	References	152
3	Multiphoton excitation	161
3.1	Two-photon absorption	162
3.2	Fully developed multiphoton transitions	165
3.2.1	Nonlinear transmission	167
3.2.2	Nonlinear photon drag effect	170
3.3	Multiphoton transitions in low-dimensional systems	175
	References	181
4	Saturation of absorption	185
4.1	Basics of optical saturation	187
4.1.1	Rabi oscillations	187
4.1.2	Relaxation	189
4.2	Low-power saturation	195
4.2.1	Nonlinear spectroscopy of impurities	195
4.2.2	Nonlinear cyclotron resonance	201
4.3	Saturation of inter-subband transitions in wide QWs	204
4.4	Reduction of depolarization shift in QWs	206
4.5	Saturation of direct transitions in bulk <i>p</i> -Ge	209
4.6	Pump-and-probe technique	213
4.7	Spin-sensitive bleaching	214
4.8	Rabi oscillations	219
	References	224
5	Electron gas heating	237
5.1	Electron temperature limit and μ -photoconductivity	238
5.2	Heating and absolute electron gas cooling	239
5.3	Dynamic inversion of μ -photoconductivity	240
5.4	Nonlinear μ -photoconductivity in 2DEG	243
5.4.1	Si-MOSFET structures	244
5.4.2	III-V-compound low-dimensional structures	247
5.5	Light impact ionization	249
5.5.1	Bulk InSb	251
5.5.2	Quantum well structures	255
5.6	Heating of phonons	256
	References	260
6	Terahertz nonlinear optics	269
6.1	Nonlinear optical susceptibility	270
6.2	Terahertz second-order nonlinearity	273

6.3	Third-harmonic generation and four-wave mixing	278
6.4	Terahertz electrooptics	280
6.4.1	Terahertz side-bands of near-infrared radiation	280
6.4.2	Dynamic Franz–Keldysh and Stark effects	282
6.5	THz nonlinearities in semiconductor superlattices	284
	References	285
7	Terahertz radiation induced currents	291
7.1	Photon drag effect	293
7.1.1	Direct optical transitions	294
7.1.2	Drude absorption	306
7.1.3	Photoionization of impurities and transitions between Zeeman-split levels	308
7.2	Linear photogalvanic effect	311
7.2.1	Bulk materials	316
7.2.2	Quantum wells	318
7.2.3	Magneto-photogalvanic effects	322
7.2.4	Magneto-gyrotropic effects in quantum wells	325
7.3	Spin photocurrents	331
7.3.1	Circular photogalvanic effect	332
7.3.2	Spin-galvanic effect	349
7.3.3	Circular photogalvanic effect versus spin-galvanic effect	361
7.3.4	Application of spin photocurrents	361
7.3.5	Monopolar spin orientation	364
	References	367
8	Bloch oscillations	379
8.1	Superlattice transport	380
8.1.1	Miniband conductance	381
8.1.2	Wannier–Stark hopping	383
8.1.3	Sequential tunneling	384
8.1.4	Interplay between transport mechanisms	385
8.2	THz excitation of superlattices	386
8.3	Dynamic localization and negative conductivity	391
8.4	THz gain in superlattices	393
	References	395
