Crystallography Of Modular Materials

GIOVANNI FERRARIS

*Department of Mineralogical and Petrologic Sciences
University of Turin*

EMIL MAKOVICKY

*Mineralogical Department of the Geological Institute
University of Copenhagen*

STEFANO MERLINO

*Department of Earth Science
University of Pisa*

OXFORD
UNIVERSITY PRESS

Contents

1	Modular series—Principles and types	1
1.1	Brief outline	2
1.2	Hierarchical classification of structures	3
1.3	Short recapitulation of non-modular categories of similarity	5
1.4	Elements of modular description. Types of homologous/ polysomatic series	9
1.5	Polysomatism	35
1.6	Chemical composition series	41
1.7	Variable-fit homologous series and series with a combined character	42
1.8	Merotype and plesiotype series	57
1.9	Ordered derivatives of solid solutions as modular structures	110
1.10	Principles of prediction of modular structures	113
2	OD structures	127
2.1	Introduction	127
2.2	OD character of wollastonite	128
2.3	OD structures of equivalent layers	133
2.4	Examples of OD families built up with equivalent layers	154
2.5	OD structures built up with $M > 1$ kinds of layers	180
2.6	Examples of OD structures consisting of two kinds of layers	190
2.7	List of other OD structures	201
	Appendix 2.1 Table of monoclinic and orthorhombic OD-groupoid families	202
	Appendix 2.2 Diffraction effects in wollastonite	204
3	Polytypes and polytype categories	207
3.1	Introduction	207
4	Application of modularity to structure description and modelling	227
4.1	Introduction	227
4.2	The perovskite module	228
4.3	Structures based on spinel modules	244
4.4	Slicing tetrahedral and octahedral layers	250
4.5	Miscellaneous modular structures	269
4.6	Some conclusions	278

5	Modularity at crystal scale — Twinning	280
5.1	Classification of twins	280
5.2	Consequences of twinning	290
5.3	Detwinning procedure	296
5.4	Examples	299
5.5	Conclusions	307
	References	309
	Subject Index	363
