Stephen L. Campbell, Jean-Philippe Chancelier
and Ramine Nikoukhah

Modeling and Simulation in Scilab/Scicos with ScicosLab 4.4

Second Edition

4) Springer

Contents

Part I Scilab

1	General Information	3
1.1	What Is Scilab?	3
1.2	How to Start?	4
1.2.1	Installation	4
1.2.2	First Steps	4
1.2.3	Line Editor	5
1.2.4	Documentation	6
1.3	Typical Usage	6
1.4	ScicosLab an the Web	7
2	Introduction to Scilab	9
2.1	Scilab Objects	11
2.1.1	Matrix Construction and Manipulation	12
2.1.2	Strings	17
2.1.3	Boolean Matrices	19
2.1.4	Polynomial Matrices	20
2.1.5	Sparse Matrices	21
2.1.6	Lists	22
2.1.7	Functions	26
2.2	Scilab Programming	27
2.2.1	Branching	28
2.2.2	Iterations	29
2.2.3	Scilab Functions	31
2.2.4	Debugging Programs	35
2.3	Input and Output Functions	37
2.3.1	Display of Variables	37
2.3.2	Formatted Input and Output	38
2.3.3	Input Output in Binary Mode	41
2.3.4	Accessing the Host System	42
2.3.5	Graphical User Interface	43
2.4	Scilab Graphics	48
2.4.1	Basic Graphing	48
2.4.2	Graphic Tour	50
2.4.3	Graphics Objects	53

VIII Contents

2.4.4 Scilab Graphics and li5IhiX	56
2.4.5 Old Graphics Style	60
2.5 Interfacing	63
2.5.1 Linking Code	63
2.5.2 Writing an Interface	66
2.5.3 Dynamic Loading	69
3 Modeling and Simulation in Scilab	73
3.1 Types of Models	73
3.1.1 Ordinary Differential Equations	73
3.1.2 Boundary Value Problems	74
3.1.3 Difference Equations	75
3.1.4 Differential Algebraic Equations	76
3.1.5 Hybrid Systems	77
3.2 Simulation Tools	78
3.2.1 Ordinary Differential Equations	78
3.2.2 Boundary Value Problems	90
3.2.3 Difference Equations	95
3.2.4 Differential Algebraic Equations	98
3.2.5 Hybrid Systems	101
4 Optimization	107
4.1 Comments an Optimization and Solving Nonlinear Equations	107
4.2 General Optimization	108
4.3 Solving Nonlinear Equations	112
4.4 Nonlinear Least Squares	113
4.5 Parameter Fitting	117
4.6 Linear and Quadratic Programming	119
4.6.1 Linear Programs	119
4.6.2 Quadratic Programs	120
4.6.3 Semidefinite Programs	120
4.7 Differentiation Utilities	120
4.7.1 Higher Derivatives	122
5 Examples	125
5.1 Modeling and Simulation of an N-Link Pendulum	125
5.1.1 Equations of Motion of the N-Link Pendulum	126
5.1.2 Generated Code and Simulation	130
5.1.3 Maple Code	133
5.2 Modeling and Simulation of a Car	135
5.2.1 Basic Model	135
5.2.2 Equations of Motion	136
5.2.3 Simulation Model	138
5.2.4 Scilab Implementation	139
5.2.5 Simulation Result	141
5.3 Open-Loop Control to Swing Up a Pendulum	142
5.3.1 Model	142
5.3.2 Control Problem Formulation	142
5.3.3 Optimization Problem	143
5.3.4 Implementation in Scilab	145

5.4	Parameter Fitting and Implicit Models	147
5.4.1	Mathematical Model	148
5.4.2	Scilab Implementation	148

Part II Scicos

6	Introduction	159
7	Getting Started	163
7.1	Construction of a Simple Diagram	163
7.1.1	Running Scicos	163
7.1.2	Editing a Model	163
7.1.3	Diagram Simulation	166
7.1.4	Changing Block Parameters	167
7.2	Symbolic Parameters and Context	170
7.3	Virtual blocks and Hierarchy	173
7.3.1	Placing a Super Block in a Diagram	174
7.3.2	Editing a Super Block	174
7.3.3	Scope of Variables in Super Block Contexts and Masking	176
7.4	Save and Load Operations	178
7.4.1	Scicos File Formats	178
7.4.2	Super Block and Palette	178
7.5	Synchronism and Special Blocks	179
8	Scicos Formalism	183
8.1	Activation Signal	183
8.1.1	Block Activation	183
8.1.2	Activation Generation	185
8.2	Inheritance	186
8.3	Always Active Blocks	187
8.4	Constant Blocks	188
8.5	Conditional Blocks	188
9	Scicos Blocks	193
9.1	Block Behavior	193
9.1.1	External Activation	193
9.1.2	Always Activation	196
9.1.3	Internal Zero-Crossing	196
9.2	Blocks Inside Palettes	196
9.3	Modifying Block Parameters	197
9.4	Super Block and Scifunc	197
9.4.1	Super Blocks	198
9.4.2	Scifunc	198
9.5	Constructing New Basic Blocks	198
9.5.1	Interfacing Function	199
9.5.2	Computational Function	201
9.5.3	Saving New Blocks	216
9.6	Constructing and Loading a New Palette	216

10 Examples and Applications	219
10.1 Academic examples	219
10.1.1 Predator Prey Model	219
10.1.2 Control Application	222
10.1.3 Signal Processing Application	223
10.1.4 Queuing Systems	226
10.1.5 Neuroscience Application	228
10.1.6 A Fluid Model of TCP-Like Behavior	230
10.1.7 Interactive GUI	231
10.2 Applications	235
11 Batch Processing in Scilab	239
11.1 Piloting Scicos via Scilab Cominands	239
11.1.1 Function scicos im	240
11.1.2 Function sc cos_s imuists	244
11.2 Data Sharing	246
11.2.1 Context Variables	246
11.2.2 Input/Output Files	246
11.2.3 Special blocks: From Workspace and To Workspace	249
11.3 Steady-State Solution and Linearization	255
11.3.1 Scilab Function steadycos	257
11.3.2 Scilab Function lincos	258
12 Code Generation	263
12.1 Code Generation Procedure	263
12.2 Limitations	267
12.2.1 Continuous-Time Activation	267
12.2.2 Synchronicism	268
12.3 A Look Inside	268
12.4 Some Pitfalls	270
12.5 Applications	273
13 Debugging	277
13.1 Error Messages	277
13.1.1 Block Errors	277
13.1.2 Errors During Numerical Integration	278
13.1.3 Other Errors	279
13.2 Debugging Tools	279
13.3 Examples	280
13.3.1 Log File	281
13.3.2 Animation	281
14 Implicit Scicos and Modelica	283
14.1 Introduction	283
14.2 Internally Implicit Blocks	285
14.3 Implicit Blocks	286
14.3.1 Scicos Editor	286
14.3.2 Scicos Compiler	286
14.3.3 Block Construction	287
14.4 Example	289

14.5 Scicos Block MBlock	290
14.6 Initialization	292
14.6.1 Example	293
A Inside Scicos	297
A.1 Scicos Editor	297
A.1.1 Main Editor Function	297
A.1.2 Structure of scs_m	300
A.2 Scicos Compiler	303
A.2.1 First Compilation Stage	303
A.2.2 Second Compilation Stage	304
A.2.3 Structure of Vocpr	304
A.2.4 Partial Compilation	307
A.3 Scicos Simulator	308
B Coding Examples	309
B.1 Scicos Blocks of Type 5	309
B.1.1 Type 5 Block for the Bouncing Ball Example	309
B.1.2 Animation Block for the Cart Pendulum Example	310
B.2 Animation Program for the Car Example	314
B.3 Extraction Program for the Graphic Example	315
B.4 Maple Code Used for Modeling the N-Link Pendulum	316
References	321
Index	325
