Solar Hydrogen Energy Systems

**Science and Technology
for the Hydrogen Economy**

Contents

1	Introduction	1
1.1	The Current Situation	1
1.2	The Peak Oil Theory	2
1.3	Forms of Energy Sources and Environmental Impact	4
1.4	Sustainability of an Energy System	6
1.5	A Hydrogen New Energy System	7
1.6	Scenarios for the Future	7
1.7	Alternatives to Hydrogen	9
	References	10
2	Hydrogen	13
2.1	Hydrogen as Energy Carrier	13
2.2	Properties	14
2.3	Production	16
2.3.1	Steam Reforming	16
2.3.2	Solid Fuel Gasification	17
2.3.3	Partial Oxidation	17
2.3.4	Water Electrolysis	18
2.3.5	Thermo-Cracking	18
2.3.6	Ammonia Cracking	18
2.3.7	Other Systems: Photochemical, Photobiological, Semiconductors and their Combinations	19
2.4	Usage	20
2.4.1	Direct Combustion	20
2.4.2	Catalytic Combustion	23
2.4.3	Direct Steam Production from Combustion	23
2.4.4	Fuel Cell	23
2.5	Degenerative Phenomena and Material Compatibility	24
2.5.1	Material Degeneration	24
2.5.2	Choice of Materials	25
2.6	Components: Pipes, Joints and Valves	26

X Contents

2.7	Transport	26
	References	27
3	Electrolysis and Fuel Cells	29
3.1	Introduction	29
3.2	Chemical Kinetics	30
3.3	Thermodynamics	31
3.4	Electrode Kinetics	32
3.4.1	Activation Polarisation	32
3.4.2	Ohmic Polarisation	33
3.4.3	Concentration Polarisation	33
3.4.4	Reaction Polarisation	34
3.4.5	Transfer Polarisation	34
3.4.6	Transport Phenomena	34
3.4.7	Influence of Temperature and Pressure on Polarisation Losses	35
3.5	Energy and Exergy of the Cell	35
3.6	Electrolyser	36
3.6.1	Functioning	36
3.6.2	Technology	37
3.6.2.1	Alkaline Electrolysers	37
3.6.2.2	Solid Polymer (Polymeric Membrane) Electrolysers	38
3.6.2.3	High-Temperature Electrolysers	38
3.6.3	Thermodynamics	39
3.6.4	Mathematical Model	40
3.6.5	Thermal Model	42
3.7	Fuel Cell	43
3.7.1	Functioning	43
3.7.2	Technology	45
3.7.2.1	Alkaline Fuel Cell	45
3.7.2.2	Phosphoric Acid Fuel Cell	45
3.7.2.3	Polymeric Electrolyte Membrane Fuel Cell	46
3.7.2.4	Molten Carbonate Fuel Cell	46
3.7.2.5	Solid Oxide Fuel Cell	47
3.7.3	Thermodynamics	48
3.7.4	Mathematical Model	50
3.7.5	Thermal Model	52
	References	52
4	Solar Radiation and Photovoltaic Conversion	53
4.1	Solar Radiation	53
4.2	Photovoltaic Effect, Semiconductors and the p-n Junction	55
4.3	Crystalline Silicon Photovoltaic Cells	58
4.4	Other Cell Technologies	61

4.5	Conversion Losses	61
4.6	Changes in the I - U Curve	62
4.7	Photovoltaic Cells and Modules	63
4.8	Types of Photovoltaic Plants	65
4.9	Radiation on the Receiving Surface	67
4.10	Determination of the Operating Point	68
	References	71
5	Wind Energy	73
5.1	Introduction	73
5.2	Mathematical Description of Wind	74
5.3	Wind Classification	76
5.4	Mathematical Model of the Aerogenerator	77
5.5	Power Control and Design	83
5.6	Wind Turbine Rating	86
5.7	Electric Energy Conversion	86
5.8	Calculation Example	88
5.9	Environmental Impact	88
	References	89
6	Other Renewable Energy Sources for Hydrogen Production	91
6.1	Solar Thermal Energy	91
6.2	Hydroelectric Energy	93
6.3	Tidal, Wave and Ocean Thermal Energy Conversions	93
6.4	Biomasses	94
	References	95
7	Hydrogen Storage	97
7.1	Issues of Hydrogen Storage	97
7.2	Physical Storage	98
7.2.1	Compression Storage	98
7.2.1.1	Modelling	99
7.2.1.2	Dimensioning Example	101
7.2.2	Liquefaction Storage	102
7.2.3	Glass or Plastic Containments	103
7.3	Physical-Chemical Storage	104
7.3.1	Physisorption	104
7.3.2	Empirical Models of Molecular Interactions	105
7.3.3	Adsorption and Desorption Velocities	107
7.3.4	Experimental Measurements of Adsorption and Desorption	109
7.3.5	Adsorption Isotherms	109
7.3.6	Thermodynamics of Adsorption	111
7.3.7	Other Isotherms	112
7.3.8	Classification of Isotherms	112

XII Contents

7.3.9	Carbon Materials for the Physisorption of Hydrogen	113
7.3.9.1	Nanotubes	113
7.3.9.2	Activated Carbons	114
7.3.10	Alternatives to Carbon Physisorption	115
7.3.11	Zeolites	115
7.3.12	Metallic Hydrides	116
7.4	Chemical Storage	117
7.4.1	Chemical Hydrides	117
	References	118
8	Other Electricity Storage Technologies	121
8.1	Introduction	121
8.2	Electrochemical Storage	121
8.2.1	Valve Regulated Lead-Acid	123
8.2.2	Lithium-Ion	124
8.2.3	Vanadium Redox	125
8.3	Ultra-capacitors	126
8.4	Compressed Air	127
8.5	Underground Pumped Water	128
8.6	Pumped Heat	128
8.7	Natural Gas Production	128
8.8	Flywheels	129
8.9	Superconducting Magnetic Energy Storage	130
	References	130
9	Study and Simulation of Solar Hydrogen Energy Systems	133
9.1	Solar Hydrogen Energy Systems	133
9.2	Control Logic	134
9.3	Performance Analysis	136
9.3.1	Sub-Systems Efficiencies	136
9.3.1.1	Photovoltaic Modules	136
9.3.1.2	Aerogenerator	137
9.3.1.3	Electrolyser	137
9.3.1.4	Fuel Cell	138
9.3.1.5	Compressor	138
9.3.1.6	Electric Systems	138
9.3.2	Complete System Efficiencies	138
9.3.2.1	Hydrogen Production Efficiency	139
9.3.2.2	<i>Direct Route</i> Efficiency	139
9.3.2.3	<i>Hydrogen Loop</i> Efficiency	139
9.3.2.4	Complete System Efficiency	140
9.4	Simulation with PV Conversion and Compression Storage	140
9.5	Simulation with PV Conversion and Activated-Carbon Storage	147
9.6	Simulation with Wind Energy Conversion, Compression and Activated-Carbon Storage	155

9.7	Notes on Exergy Analysis	162
9.8	Remarks on the Simulation of Solar Hydrogen Energy Systems ..	162
	References	163
