Sliding-Mode Control of PEM Fuel Cells

Springer

Contents

1	Introducing Fuel Cells	1
1.1	An Outlook of the Energy Perspective	1
1.2	What is a Fuel Cell?	3
1.3	State-of-the-Art on Fuel Cell Systems Technology	3
1.3.1	Fuel Cell Units	4
1.3.2	Fuel Cell Stacks	5
1.3.3	Auxiliary Components	6
1.4	A Brief History of Fuel Cells	6
1.5	Closed-Loop Operation of Fuel Cells. Why?	9
1.6	Scope and Outline of the Book	10
	References	10
2	PEM Fuel Cell Systems	13
2.1	An Introduction to PEM Technology	13
2.2	Basics of PEM Fuel Cells Operation	14
2.3	Efficiency and Power Conversion	17
2.4	State-of-the-Art in PEM Fuel Cells Technology	18
2.5	Components and Associated Devices	19
2.5.1	Polymeric Membranes	19
2.5.2	Electrodes	20
2.5.3	Gas Diffusion Layers	21
2.5.4	Sealing Gaskets	22
2.5.5	Bipolar Plates	22
2.5.6	Auxiliary Devices	24
2.6	Available PEM Fuel Cell Models in the Open Literature	27
2.6.1	Control Oriented Models	28
2.6.2	Control Objectives and Challenges	29
2.6.3	Recent Advances on PEM Fuel Cell Control	30
	References	31
3	Fundamentals of Sliding-Mode Control Design	35
3.1	Introduction	35

3.2	Variable Structure Control Preliminaries	35
3.3	Fundamentals of Sliding-Mode Control	36
3.3.1	Diffeomorphisms, Lie Derivative and Relative Degree . . .	37
3.3.2	First-Order Sliding Mode	39
3.3.3	Equivalent Control Regularisation Method. Ideal Sliding Dynamics	40
3.3.4	Existence Conditions for the First-Order Sliding Regime . .	42
3.3.5	Extension to Nonlinear Systems Non-affine in Control . . .	45
3.3.6	Filippov Regularisation Method	45
3.3.7	Discontinuous Control Action in Classic Sliding-Mode Control. Chattering Problem	47
3.4	Some General Concepts on Higher-Order Sliding Modes	48
3.4.1	Definition of Differential Inclusion	49
3.4.2	Sliding Modes on Manifolds	50
3.4.3	Sliding Modes and Constraint Functions. Regularity Condition	51
3.4.4	Closing Comments on Higher-Order Sliding Modes in Control Systems	53
3.5	Design of Second-Order Sliding-Mode Controllers	54
3.5.1	Second-Order Sliding Generalised Problem	54
3.5.2	Solution of the Control Problem. SOSM Algorithms	56
3.6	Conclusions	69
	References	69
4	Assessment of SOSM Techniques Applied to Fuel Cells. Case Study: Electric Vehicle Stoichiometry Control	73
4.1	Introduction	73
4.2	Succinct Description of the Electric Vehicle Fuel Cell System . . .	74
4.2.1	Air Compressor	75
4.2.2	Air Supply Manifold	76
4.2.3	Air Humidifier and Temperature Conditioner Subsystems . .	77
4.2.4	Cathode Channels	77
4.2.5	Anode Channels	78
4.2.6	Water Model of the Polymeric Membrane	79
4.2.7	Return Manifold	80
4.3	Electric Vehicle FCGS State Space Model for SOSM Control Design	80
4.4	Control Objective and Sliding Surface	82
4.5	Design of a SOSM Super-Twisting Controller for the Electric Vehicle FCGS	85
4.6	SOSM Super-Twisting Controller Simulation Results	88
4.7	Comparison with Other Control Strategies	93
4.7.1	Different SOSM Control Algorithms	93
4.7.2	LQR Controller	97
4.8	Conclusions	102
	References	102

5	Control-Oriented Modelling and Experimental Validation of a PEMFC Generation System	105
5.1	Introduction	105
5.2	Air Compressor Subsystem	106
5.2.1	Air Compressor Motor Dynamic Equations	107
5.2.2	Diaphragm Vacuum Pump Characteristics	111
5.3	Air Supply Manifold Subsystem	112
5.4	Air Humidification Subsystem	113
5.4.1	Step 1	114
5.4.2	Step 2	115
5.5	Fuel Cell Stack Flow Subsystem	117
5.5.1	Cathode Channels	117
5.5.2	Anode Channels	120
5.5.3	Membrane Water Transport	121
5.6	Electrical Characterisation of the Fuel Cell Stack	123
5.7	Conclusions	126
	References	128
6	SOSM Controller for the PEMFC-Based Generation System. Design and Implementation	129
6.1	Introduction	129
6.2	State Space Model of the Experimental Fuel Cell System for Control Design	129
6.2.1	Control Output	133
6.2.2	Auxiliary Functions	133
6.3	Control Objective	134
6.4	Controller Synthesis	137
6.4.1	Super-Twisting Algorithm	139
6.4.2	Twisting Algorithm	140
6.4.3	Sub-Optimal Algorithm	140
6.4.4	Feedforward Term	141
6.5	Simulation Results	141
6.6	Experimental Set-up of the PEM Fuel Cell System	143
6.7	Experimental Tests	144
6.7.1	Regulation Tests	144
6.7.2	Perturbation Tests	148
6.8	Conclusions	150
	References	152
7	Conclusions, Open Lines and Further Reading	153
7.1	Main Results	153
7.2	Further Issues Related to PEMFC Control	154
7.2.1	Adaptive Super-Twisting Algorithms	154
7.2.2	HOSM MIMO Control	155
7.2.3	Model Predictive Control	155
7.2.4	Observers for Internal Variables	156

7.3	Further Issues Related to Fuel-Cell-Based Systems	157
7.3.1	Hybrid Standalone Systems	157
7.3.2	Distributed Generation Systems	157
	References	158
Appendix A	Electric Vehicle PEM Fuel-Cell Stack Parameters	161
A.1	Return Manifold Polynomial Fitting	161
A.2	Differential Equations Parameters	161
A.3	Controller Parameters	163
	References	164
Appendix B	Laboratory FC Generation System Parameters	165
Appendix C	Laboratory FCGS State Space Functions and Coefficients	169
C.1	Expression of $\varphi(x, u, t)$	169
C.2	Model Coefficients	172
C.3	Feedforward Control Action	173
