PART I FUNDAMENTALS	
1 A brief introduction to strongly correlated electronic materials	3
E. DAGOTTO and Y. TOKURA	
1.1 Motivation	3
1.2 Introduction	3
1.3 Why correlated electrons?	5
1.4 Control of correlated electrons in complex oxides	6
1.5 Ordering of charge, spin, and orbital degrees of freedom	11
1.6 Model Hamiltonians	14
1.7 Intrinsically inhomogeneous states	15
1.8 Giant responses in correlated electron systems	18
1.9 Importance of quenched disorder and strain	24
1.10 Outlook for correlated-electron technology: spintronics, double perovskites, multiferroics, orbitronics, resistance switching	28
1.11 Conclusions	32
Acknowledgments	32
References	32
2 Magnetoelectric coupling and multiferroic materials	38
Gustau CATALAN and James F. SCOTT	
2.1 Introduction: magnetoelectric coupling and multiferroic materials	38
2.2 Magnetoelectric coupling	40
2.2.1 Linear coupling: Dzyaloshinskii–Moriya effect, electrically induced spin canting, and Shtrikman limit	41
2.2.2 Biquadratic (strain mediated) coupling	42
2.2.3 Perovskite oxides: why are they seldom multiferroic?	43
2.3 Magnetoelectric multiferroics	44
2.3.1 Perovskites with ferroelectricity caused by lone-pair polarization: BiFeO ₃	44
2.3.2 Oxides with ferroelectricity caused by spins spirals: TbMnO ₃ , TbMn ₂ O ₅	46
2.3.3 Hexagonal multiferroics: YMnO ₃	46
2.3.4 Unconfirmed oxide multiferroics: RNiO ₃ (R = rare earth or Bi)	47
2.3.5 Magnetoelectric relaxors	48
2.3.6 Ferromagnetic ferroelectric fluorides	51
2.3.7 Ferrimagnetic ferroelectrics	55

Appendix 2.1 Magnetoelectric measurements	57
Appendix 2.2 Critical exponents in isostructural phase transitions	59
References	61
 PART II OXIDE FILMS AND INTERFACES: GROWTH AND CHARACTERIZATION	
3 Synthesis of epitaxial multiferroic oxide thin films	73
Thomas TYBELL and Chang-Beom EOM	
3.1 Introduction	73
3.2 Substrates	75
3.2.1 Strain, orientation, and symmetry control by choice of substrate	75
3.2.2 Substrate termination and surface quality	77
3.3 Strain engineering as a tool for controlling functional oxide thin films	79
3.3.1 SrRuO_3 —a case study of strain engineering	80
3.3.2 Effect of defects	86
3.4 Vicinal control of functional properties	86
3.4.1 SrRuO_3 —a case study of vicinal control of orthorhombic domain structure	87
3.4.2 BiFeO_3 —domain control of a prototype rhombohedral material by substrate miscut	88
3.4.3 Mono-domain samples—enabling fundamental studies and enhanced properties of BiFeO_3	91
3.5 Conclusions	95
Acknowledgments	96
References	96
4 Synchrotron X-ray scattering studies of oxide heterostructures	99
Dillon D. FONG	
4.1 Introduction	99
4.2 Surface X-ray diffraction	100
4.3 Resonant scattering	105
4.4 Anisotropic effects	115
4.5 Summary	118
Acknowledgments	118
References	118
5 Scanning transmission electron microscopy of oxides	123
M. VARELA, C. LEON, J. SANTAMARIA, and S. J. PENNYCOOK	
5.1 Introduction to STEM	123
5.2 STEM imaging	128
5.2.1 Probe formation	129
5.2.2 Time reversal symmetry in electron microscopy	130
5.2.3 Image simulation	131
5.3 Mapping materials properties through EELS fine structure	135
5.4 Applications: interfaces in manganite/cuprate heterostructures	138

5.5	Summary	150
	Acknowledgments	150
