Contents

Recognition	xi
Technical Status and Challenges	xii
1 The Perspective on Failure and Direction of Approach	1
1.1 Materials Failure Problem	1
1.2 Direction and Scope	2
1.3 Guides for Utility	4
References	5
2 History, Conditions, and Requirements	6
2.1 Historical Review	7
2.2 Conditions and Requirements of Study	12
References	14
3 Isotropic Baselines	16
3.1 Failure Characterization	16
3.2 Stress versus Strain	17
3.3 Mises and Tresca Failure Criteria	19
3.4 Drucker–Prager Failure Criterion	23
3.5 Coulomb–Mohr Failure Criterion	25
3.6 The Bottom Line	28
References	29
4 The Failure Theory for Isotropic Materials	30
4.1 Theoretical and Testing Problems	30
4.2 Properties or Parameters	31
4.3 The Organizing Principle	32
4.4 The Constitutive Equations of Failure, Part A: Polynomial-Invariants Criterion	34
4.5 The Constitutive Equations of Failure, Part B: Fracture Criterion	39
4.6 Ductile and Brittle Limits	42
4.7 Problem Sets Purpose	46
Problem Areas for Study	48
References	49
