Weng W. Chow   Stephan W. Koch

Semiconductor-Laser Fundamentals

Physics of the Gain Materials

With 132 Figures and 3 Tables

Springer

Contents

1. Basic Concepts	1
1.1 Historical Background	1
1.2 Laser Device	3
1.3 Heterostructures	6
1.4 Elementary Aspects of Band Structures	10
1.5 Units	15
1.6 Fermi-Dirac Distributions	16
1.7 Quantum Confinement	21
1.8 Slowly-Varying Maxwell Equations	25
1.9 Quantum Mechanics of the Semiconductor Medium	28
2. Free-Carrier Theory	36
2.1 Free-Carrier Equations of Motion	37
2.2 Quasi-Equilibrium Approximation	45
2.3 Semiconductor Gain	49
2.4 Temperature Dependence of Gain	58
2.5 Gain Saturation	62
2.6 Carrier Induced Refractive Index	65
2.7 Linewidth Enhancement or Antiguiding Factor	69
3. Coulomb Effects	72
3.1 Semiconductor Bloch Equations	75
3.2 Interband Coulomb Effects	80
3.3 Screened Hartree-Fock Approximation	83
3.4 Bandgap Renormalization in the Screened Hartree-Fock Approximation	88
3.5 Padé Approximation	90
3.6 Bulk Semiconductors	92
3.7 Quantum-Wells	98
4. Correlation Effects	107
4.1 Coulomb Correlation Effects	108
4.2 Carrier Quantum Boltzmann Equation	111
4.3 Dephasing and Screening	116

4.4	Formulation of Numerical Problem	117
4.4.1	Quantum-Wells	119
4.4.2	Bulk-Material	143
4.5	Carrier-Phonon Scattering	145
4.6	Characteristic Relaxation Times	147
5.	Bulk Band Structures	150
5.1	Bloch Theorem	150
5.2	Electronic States at $k = 0$	151
5.3	$\mathbf{k} \cdot \mathbf{p}$ Theory	155
5.4	Conduction Bands	156
5.5	Valence Bands	157
5.6	Luttinger Hamiltonian	159
6.	Quantum Wells	166
6.1	Envelope Approximation Method	166
6.2	Band Mixing	170
6.3	Strained Quantum Wells	175
6.4	Dipole Matrix Elements	181
6.5	6×6 Luttinger Hamiltonian	185
6.6	Wurtzite Crystal	188
7.	Applications	196
7.1	GaAs-AlGaAs Quantum Wells	196
7.2	InGaAs-AlGaAs Strained Quantum Wells	204
7.3	InGaAs-InP	210
7.4	InGaP-InAlGaP Red-Wavelength Lasers	213
7.5	II-VI Wide-Bandgap Systems	218
7.6	Group-III Nitrides	224
	References	235
	Index	241
