Physics of Transition Metal Oxides

With 137 Figures

Springer

Contents

1. Introduction

<i>S. Alaeekawa</i>	<i>I</i>
1.1 Transition Metal Ions in Crystal Fields	1
1.2 Crystal Structure and Physical Properties	4
1.3 Exchange Interaction	8
1.4 Orbital Degeneracy	15
1.5 Double-Exchange Interaction	19
1.6 Magnetic Anisotropy	22
1.6.1 Single Ion Anisotropy	22
1.6.2 Anisotropic Exchange Int eractions	25
References	34

2. Cuprates

<i>T. Tohyama</i>	37
2.1 Underlying Electronic Structure of Cuprates	38
2.1.1 Charge-Transfer-Type Insulators	38
2.1.2 Model Haniltonian	41
2.1.3 Superexchange Interaction	43
2.1.4 Cyclic Four-Spin Interaction	49
2.1.5 Zhang-Rice Singlet State	50
2.1.6 Optical Excitations	55
2.2 One-Dimensional Cuprates	58
2.2.1 Spin-Charge Separation	58
2.2.2 Realization of Spin-Charge Separation	63
2.2.3 Charge Dynamits in Insulating Cuprates	68
2.2.4 Nonlinear Optical Response	74
2.2.5 Spin Dynamits in Insulating Cuprates	79
2.3 Two-Dimensional Cuprates	80
2.3.1 Single Carrier in Mott Insulator	81
2.3.2 Phase Diagram	86
2.3.3 Optical Conductivity	90
2.3.4 Single-Particle Spectral Function	93
2.3.5 Chemical Potential	94
2.4 Summary	95
References	96

3. Theory of Superconductivity

<i>S.E. Barnes</i>	101
3.1 The BCS Pairing Theory	103
3.2 Phonons in Solids	107
3.3 Phonons as Intermediate Bosons.....	108
3.4 Theory of the Anti-ferromagnetic Parent Compounds	111
3.5 The Jordan—Wigner Transformation and Flux Tubes	116
3.6 Coherent States, Grassman Variables and Flux Tubes	120
3.7 Mean-Field Approximations and Flux States	122
3.8 Bogoliubov Theory for a Bose Superfluid	124
3.9 Auxiliary Particle Methods	126
3.10 Magnetic Exchange Interactions via Intermediate Bosons	130
3.11 The (Mean-Field) RVB Slave Boson Theory	131
3.12 The Gutzwiller Projection and a U(1) Symmetry	136
3.13 Auxiliary Particles and the Introduction of Flux Tubes	137
3.14 Spin Pairing	140
3.15 Fermionic Excitations in an Anti-ferromagnet	141
3.16 SU(3) Approach to Hole Coherent States.....	143
3.17 The Effective Exchange for Coherent Doping	147
3.18 SO(5) Theory	150
3.19 SO(5) and SU(3) Theories	155
3.20 Gossanier Superconductivity	158
3.21 Summary	163
References.....	165

4. Manganites

<i>S. Ishihara</i>	167
4.1 Manganite with Cubic Perovskite Structure.....	167
4.1.1 Introduction	167
4.1.2 Electronic Hamiltonian and Exchange Interaction	170
4.1.3 Jahn-Teller Effect and Cooperative Jahn-Teller Effect	178
4.1.4 Phase Diagram and Orbital Order	182
4.1.5 Orbital Liquid State	186
4.2 Manganite with Layered Structure.....	190
4.2.1 Phase Diagram	190
4.2.2 Stability of Orbital and Magnetic Structure	193
4.2.3 Experiments for Spin and Orbital Correlation	194
4.3 Resonant X-ray Scattering (RXS)	197
4.3.1 Experiments.....	198
4.3.2 Scattering Cross Section	200
4.3.3 Azimuthal Angle Dependence.....	203
4.3.4 Mechanism of RXS	206
4.3.5 Microscopic Calculations of the RXS Intensity	209
4.4 Orbital Excitation	211

4.5 Other Orbital-Related Topics	216
4.6 Summary	219
References	219
5. Titanates and Vanadates	
<i>S. Ishihara</i>	225
5.1 Introduction	225
5.2 Orbital States	226
5.2.1 Perovskite Titanates	226
5.2.2 Perovskite Vanadates.....	229
5.3 Metar-Insulator Transition	230
5.4 Electronic State and Model Hamiltonian	231
5.5 Summary	238
References	238
6. Cobaltates	
<i>W. Koshibae</i>	241
6.1 Low-, High- and Intermediate-Spin States	241
6.2 Thermoelectric Materials and Cobalt Oxides	245
6.3 Thermoelectric Effect	246
6.4 Linear Response Theory for Thermoelectric Systems	250
6.5 Thermopower in Strongly Correlated Systems:	
Approach from High Temperature Side.....	252
6.6 Spin and Orbital States and the Thermopower	254
6.7 Thermopower of the Degenerate Electron Gas	257
6.8 Summary and Discussion —	
The Path to New Thermoelectric Materials	257
References	259
7. Quantum Effects in Orbitally Degenerate Systems	
<i>G. Khaliullin</i>	261
7.1 Systems with e_g Orbital Degeneracy	262
7.1.1 Spin-Orbital Model	262
7.1.2 Orbital-Only Model	269
7.1.3 Orbital-Charge Coupling, Orbital Polarons	272
7.1.4 Orbital Liquids, Anomalous Transport	279
7.2 Systems with t_{2g} Orbital Degeneracy	282
7.2.1 Spin-Orbital Model	283
7.2.2 Orbital-Only Model	291
7.3 High Spin Systems with t_{2g} Orbital Degeneracy	298
7.3.1 Formation of One-Dimensional Orbital Chains	298
7.3.2 Spin-Orbital Dimerization	302
7.4 Summary	306
References	306

Appendices

A. Optical Conductivity	
<i>T. Tohyama</i>	311
B. Exact Diagonalization Technique: The Lanczos Method	
<i>T. Tohyama</i>	317
C. Projection Method (Memory Function Method, Composite Operator Method)	
<i>S. Ishihara</i>	321
D. Thermoelectric Effects	
<i>Koshibae</i>	323
D.1 Seebeck Effect	323
D.2 Peltier Effect	325
D.3 Thomson Effect	326
D.4 The First and Second Laws of Thermodynamics and Thermoelectric Response in Solids:	
Thomson's Considerations	328
D.5 The Third Law of Thermodynamics and Thermoelectric Response in Solids	330
References for Appendices	333
Index	335
