The CMS Preliminary analysis with 5.43 pb⁻¹ (2.76 TeV) data shows a comparison between the data points (black circles) and the theoretical predictions (yellow boxes). The graph represents the differential cross section for the process $d^2 \sigma / dp_T dp_T (8 \text{ TeV}) / dy$ with $|y| < 0.5$. The analysis uses the CT10 NLO ⊗ NP model. The CMS Preliminary note indicates that the data is preliminary and not fully reviewed.
