The graph shows the CMS Preliminary results for 27 fb$^{-1}$ & 36 fb$^{-1}$ (13 TeV) data. It displays the 95% CL limits for the observed and expected 1 s.d. and 2 s.d. values. The graph compares the observed cross-section times acceptance ($\sigma \times B \times A$) in pb for different mass values of the RS graviton. The low mass and high mass regions are indicated on the graph. The expected limits are shown in green (± 1 s.d.) and yellow (± 2 s.d.).
