The graph shows the acceptance times efficiency for different scenarios.

- **Z' → ZH, Z → νν, VBF signal**
- **0l, 2 b tag, VBF**
- **0l, ≤1 b tag, VBF**

The x-axis represents the mass of the Z' particle (m_{Z'} (GeV)) ranging from 1000 to 5000 GeV, and the y-axis represents the acceptance times efficiency ranging from 10^{-3} to 10^{-1}.

The CMS logo and the note "Simulation Preliminary" are also present on the graph.
