William R. Leo

Techniques for Nuclear and Particle Physics Experiments

A How-to Approach

Second Revised Edition

With 256 Figures, 40 Tables and Numerous Worked Examples

Springer-Verlag

Berlin Heidelberg New York

London Paris Tokyo

Hong Kong Barcelona

Budapest

Contents

1. Basic Nuclear Processes in Radioactive Sources	1
1.1 Nuclear Level Diagrams	2
1.2 Alpha Decay	3
1.3 Beta Decay	4
1.4 Electron Capture (EC)	6
1.5 Gamma Emission	6
1.5.1 Isomeric States	6
1.6 Annihilation Radiation	7
1.7 Internal Conversion	7
1.8 Auger Electrons	8
1.9 Neutron Sources	8
1.9.1 Spontaneous Fission	8
1.9.2 Nuclear Reactions	8
1.10 Source Activity Units	9
1.11 The Radioactive Decay Law	10
1.11.1 Fluctuations in Radioactive Decay	11
1.11.2 Radioactive Decay Chains	12
1.11.3 Radioisotope Production by Irradiation	14
2. Passage of Radiation Through Matter	17
2.1 Preliminary Notions and Definitions	17
2.1.1 The Cross Section	18
2.1.2 Interaction Probability in a Distance x . Mean Free Path	19
2.1.3 Surface Density Units	20
2.2 Energy Loss of Heavy Charged Particles by Atomic Collisions	21
2.2.1 Bohr's Calculation – The Classical Case	22
2.2.2 The Bethe-Bloch Formula	24
2.2.3 Energy Dependence	27
2.2.4 Scaling Laws for dE/dx	28
2.2.5 Mass Stopping Power	28
2.2.6 dE/dx for Mixtures and Compounds	29
2.2.7 Limitations of the Bethe-Bloch Formula and Other Effects	29
2.2.8 Channeling	30
2.2.9 Range	30
2.3 Cherenkov Radiation	35
2.4 Energy Loss of Electrons and Positrons	37
2.4.1 Collision Loss	37
2.4.2 Energy Loss by Radiation: Bremsstrahlung	38
2.4.3 Electron-Electron Bremsstrahlung	40
2.4.4 Critical Energy	40

2.4.5	Radiation Length	41
2.4.6	Range of Electrons	42
2.4.7	The Absorption of β Electrons	43
2.5	Multiple Coulomb Scattering	44
2.5.1	Multiple Scattering in the Gaussian Approximation	46
2.5.2	Backscattering of Low-Energy Electrons	48
2.6	Energy Straggling: The Energy Loss Distribution	49
2.6.1	Thick Absorbers: The Gaussian Limit	49
2.6.2	Very Thick Absorbers	50
2.6.3	Thin Absorbers: The Landau and Vavilov Theories	50
2.7	The Interaction of Photons	53
2.7.1	Photoelectric Effect	54
2.7.2	Compton Scattering	55
2.7.3	Pair Production	57
2.7.4	Electron-Photon Showers	59
2.7.5	The Total Absorption Coefficient and Photon Attenuation ...	62
2.8	The Interaction of Neutrons	63
2.8.1	Slowing Down of Neutrons. Moderation	65
3.	Radiation Protection. Biological Effects of Radiation	69
3.1	Dosimetric Units	69
3.1.1	The Roentgen	69
3.1.2	Absorbed Dose	70
3.1.3	Relative Biological Effectiveness (RBE)	71
3.1.4	Equivalent Dose	72
3.1.5	Effective Dose	73
3.2	Typical Doses from Sources in the Environment	73
3.3	Biological Effects	74
3.3.1	High Doses Received in a Short Time	75
3.3.2	Low-Level Doses	76
3.4	Dose Limits	77
3.5	Shielding	78
3.6	Radiation Safety in the Nuclear Physics Laboratory	79
4.	Statistics and the Treatment of Experimental Data	81
4.1	Characteristics of Probability Distributions	81
4.1.1	Cumulative Distributions	82
4.1.2	Expectation Values	82
4.1.3	Distribution Moments. The Mean and Variance	82
4.1.4	The Covariance	83
4.2	Some Common Probability Distributions	84
4.2.1	The Binomial Distribution	84
4.2.2	The Poisson Distribution	85
4.2.3	The Gaussian or Normal Distribution	86
4.2.4	The Chi-Square Distribution	88
4.3	Measurement Errors and the Measurement Process	89
4.3.1	Systematic Errors	89
4.3.2	Random Errors	90
4.4	Sampling and Parameter Estimation. The Maximum Likelihood Method	91

4.4.1 Sample Moments	91
4.4.2 The Maximum Likelihood Method	92
4.4.3 Estimator for the Poisson Distribution	93
4.4.4 Estimators for the Gaussian Distribution	94
4.4.5 The Weighted Mean	96
4.5 Examples of Applications	97
4.5.1 Mean and Error from a Series of Measurements	97
4.5.2 Combining Data with Different Errors	97
4.5.3 Determination of Count Rates and Their Errors	98
4.5.4 Null Experiments. Setting Confidence Limits When No Counts Are Observed	98
4.5.5 Distribution of Time Intervals Between Counts	100
4.6 Propagation of Errors	101
4.6.1 Examples	102
4.7 Curve Fitting	103
4.7.1 The Least Squares Method	104
4.7.2 Linear Fits. The Straight Line	105
4.7.3 Linear Fits When Both Variables Have Errors	108
4.7.4 Nonlinear Fits	108
4.8 Some General Rules for Rounding-off Numbers for Final Presentation	112
5. General Characteristics of Detectors	115
5.1 Sensitivity	115
5.2 Detector Response	116
5.3 Energy Resolution. The Fano Factor	117
5.4 The Response Function	119
5.5 Response Time	120
5.6 Detector Efficiency	121
5.7 Dead Time	122
5.7.1 Measuring Dead Time	124
6. Ionization Detectors	127
6.1 Gaseous Ionization Detectors	127
6.2 Ionization and Transport Phenomena in Gases	130
6.2.1 Ionization Mechanisms	130
6.2.2 Mean Number of Electron-Ion Pairs Created	131
6.2.3 Recombination and Electron Attachment	132
6.3 Transport of Electrons and Ions in Gases	133
6.3.1 Diffusion	133
6.3.2 Drift and Mobility	134
6.4 Avalanche Multiplication	135
6.5 The Cylindrical Proportional Counter	137
6.5.1 Pulse Formation and Shape	137
6.5.2 Choice of Fill Gas	140
6.6 The Multiwire Proportional Chamber (MWPC)	141
6.6.1 Basic Operating Principle	141
6.6.2 Construction	143
6.6.3 Chamber Gas	144

6.6.4 Timing Resolution	144
6.6.5 Readout Methods	145
6.6.6 Track Clusters	147
6.6.7 MWPC Efficiency	147
6.7 The Drift Chamber	149
6.7.1 Drift Gases	150
6.7.2 Spatial Resolution	151
6.7.3 Operation in Magnetic Fields	151
6.8 The Time Projection Chamber (TPC)	151
6.9 Liquid Ionization Detectors (LID)	154
7. Scintillation Detectors	157
7.1 General Characteristics	157
7.2 Organic Scintillators	159
7.2.1 Organic Crystals	162
7.2.2 Organic Liquids	163
7.2.3 Plastics	164
7.3 Inorganic Crystals	165
7.4 Gaseous Scintillators	166
7.5 Glasses	167
7.6 Light Output Response	167
7.6.1 Linearity	168
7.6.2 Temperature Dependence	171
7.6.3 Pulse Shape Discrimination (PSD)	171
7.7 Intrinsic Detection Efficiency for Various Radiations	173
7.7.1 Heavy Ions	173
7.7.2 Electrons	174
7.7.3 Gamma Rays	174
7.7.4 Neutrons	175
8. Photomultipliers	177
8.1 Basic Construction and Operation	177
8.2 The Photocathode	178
8.3 The Electron-Optical Input System	180
8.4 The Electron-Multiplier Section	181
8.4.1 Dynode Configurations	182
8.4.2 Multiplier Response: The Single-Electron Spectrum	184
8.5 Operating Parameters	185
8.5.1 Gain and Voltage Supply	185
8.5.2 Voltage Dividers	186
8.5.3 Electrode Current. Linearity	188
8.5.4 Pulse Shape	189
8.6 Time Response and Resolution	190
8.7 Noise	192
8.7.1 Dark Current and Afterpulsing	192
8.7.2 Statistical Noise	193
8.8 Environmental Factors	194
8.8.1 Exposure to Ambient Light	194
8.8.2 Magnetic Fields	195

8.8.3	Temperature Effects	196
8.9	Gain Stability, Count Rate Shift	197
9.	Scintillation Detector Mounting and Operation	199
9.1	Light Collection	199
9.1.1	Reflection	200
9.2	Coupling to the PM	201
9.3	Multiple Photomultipliers	202
9.4	Light Guides	202
9.5	Fluorescent Radiation Converters	204
9.6	Mounting a Scintillation Detector: An Example	205
9.7	Scintillation Counter Operation	208
9.7.1	Testing the Counter	208
9.7.2	Adjusting the PM Voltage	209
9.7.3	The Scintillation Counter Plateau	209
9.7.4	Maintaining PM Gain	213
10.	Semiconductor Detectors	215
10.1	Basic Semiconductor Properties	215
10.1.1	Energy Band Structure	216
10.1.2	Charge Carriers in Semiconductors	217
10.1.3	Intrinsic Charge Carrier Concentration	217
10.1.4	Mobility	218
10.1.5	Recombination and Trapping	219
10.2	Doped Semiconductors	220
10.2.1	Compensation	222
10.3	The np Semiconductor Junction. Depletion Depth	223
10.3.1	The Depletion Depth	224
10.3.2	Junction Capacitance	226
10.3.3	Reversed Bias Junctions	226
10.4	Detector Characteristics of Semiconductors	227
10.4.1	Average Energy per Electron-Hole Pair	228
10.4.2	Linearity	229
10.4.3	The Fano Factor and Intrinsic Energy Resolution	229
10.4.4	Leakage Current	229
10.4.5	Sensitivity and Intrinsic Efficiency	230
10.4.6	Pulse Shape. Rise Time	231
10.5	Silicon Diode Detectors	233
10.5.1	Diffused Junction Diodes	233
10.5.2	Surface Barrier Detectors (SSB)	233
10.5.3	Ion-Implanted Diodes	234
10.5.4	Lithium-Drifted Silicon Diodes – Si(Li)	235
10.6	Position-Sensitive Detectors	235
10.6.1	Continuous and Discrete Detectors	235
10.6.2	Micro-Strip Detectors	237
10.6.3	Novel Position-Sensing Detectors	238
10.7	Germanium Detectors	239
10.7.1	Lithium-Drifted Germanium – Ge(Li)	239
10.7.2	Intrinsic Germanium	240

10.7.3 Gamma Spectroscopy with Germanium Detectors	241
10.8 Other Semiconductor Materials	242
10.9 Operation of Semiconductor Detectors	243
10.9.1 Bias Voltage	243
10.9.2 Signal Amplification	243
10.9.3 Temperature Effects	245
10.9.4 Radiation Damage	245
10.9.5 Plasma Effects	246
11. Pulse Signals in Nuclear Electronics	249
11.1 Pulse Signal Terminology	249
11.2 Analog and Digital Signals	250
11.3 Fast and Slow Signals	252
11.4 The Frequency Domain, Bandwidth	253
12. The NIM Standard	257
12.1 Modules	257
12.2 Power Bins	258
12.3 NIM Logic Signals	258
12.4 TTL and ECL Logic Signals	261
12.5 Analog Signals	261
13. Signal Transmission	263
13.1 Coaxial Cables	263
13.1.1 Line Constituents	265
13.2 The General Wave Equation for a Coaxial Line	266
13.3 The Ideal Lossless Cable	267
13.3.1 Characteristic Impedance	268
13.4 Reflections	268
13.5 Cable Termination, Impedance Matching	270
13.6 Losses in Coaxial Cables, Pulse Distortion	272
13.6.1 Cable Response, Pulse Distortion	275
14. Electronics for Pulse Signal Processing	277
14.1 Preamplifiers	277
14.1.1 Resistive vs Optical Feedback	279
14.2 Main Amplifiers	280
14.3 Pulse Shaping Networks in Amplifiers	280
14.3.1 CR-RC Pulse Shaping	281
14.3.2 Pole-Zero Cancellation and Baseline Restoration	281
14.3.3 Double Differentiation or CR-RC-CR Shaping	282
14.3.4 Semi-Gaussian Shaping	283
14.3.5 Delay Line Shaping	283
14.4 Biased Amplifiers	284
14.5 Pulse Stretchers	284
14.6 Linear Transmission Gate	284
14.7 Fan-out and Fan-in	285
14.8 Delay Lines	286
14.9 Discriminators	286

14.9.1 Shapers	287
14.10 Single-Channel Analyzer (Differential Discriminator)	287
14.11 Analog-to-Digital Converters (ADC or A/D)	289
14.11.1 ADC Linearity	291
14.12 Multichannel Analyzers	291
14.13 Digital-to-Analog Converters (DAC or D/A)	292
14.14 Time to Amplitude Converters (TAC or TPHC)	294
14.15 Scalers	294
14.16 Ratemeter	294
14.17 Coincidence Units	295
14.18 Majority Logic Units	295
14.19 Flip-Flops	296
14.20 Registers (Latches)	297
14.21 Gate and Delay Generators	297
14.22 Some Simple and Handy Circuits for Pulse Manipulation	297
14.22.1 Attenuators	298
14.22.2 Pulse Splitting	298
14.22.3 Pulse Inversion	299
14.23 Filtering and Shaping	299
14.23.1 Pulse Clipping	299
14.23.2 High-Pass Filter or CR Differentiating Circuit	300
14.23.3 RC Low-Pass Filter or Integrating Circuit	301
15. Pulse Height Selection and Coincidence Technique	303
15.1 A Simple Counting System	303
15.2 Pulse Height Selection	304
15.2.1 SCA Calibration and Energy Spectrum Measurement	305
15.2.2 A Note on Calibration Sources	306
15.3 Pulse Height Spectroscopy with Multichannel Analyzers	307
15.4 Basic Coincidence Technique	310
15.4.1 Adjusting the Delays. The Coincidence Curve	311
15.4.2 Adjusting Delays with the Oscilloscope	312
15.4.3 Accidental Coincidences	313
15.5 Combining Pulse Height Selection and Coincidence Determination. The Fast-Slow Circuit	313
15.6 Pulse Shape Discrimination	314
16. Electronic Logic for Experiments	317
16.1 Basic Logic Gates: Symbols	317
16.2 Boolean Laws and Identities	319
16.3 The Inhibit or Busy	321
16.4 Triggers	321
16.4.1 One-Body Scattering	322
16.4.2 Two-Body Scattering	322
16.4.3 Measurement of the Muon Lifetime	323
17. Timing Methods and Systems	325
17.1 Walk and Jitter	325
17.2 Time-Pickoff Methods	326

17.2.1 Leading Edge Triggering (LE)	326
17.2.2 Fast Zero-Crossing Triggering	327
17.2.3 Constant Fraction Triggering (CFT)	327
17.2.4 Amplitude and Risettime Compensated Triggering (ARC)	327
17.3 Analog Timing Methods	328
17.3.1 The START-STOP Time-to-Amplitude Converter	329
17.3.2 Time Overlap TAC's	330
17.4 Digital Timing Methods	330
17.4.1 The Time-to-Digital Converter (TDC)	330
17.4.2 The Vernier TDC	332
17.4.3 Calibrating the Timing System	333
18. Computer Controlled Electronics: CAMAC	335
18.1 CAMAC Systems	336
18.2 The CAMAC Standard	338
18.2.1 Mechanical Standards	338
18.2.2 Electrical Standards: Digital Signals	338
18.3 The CAMAC Dataway	338
18.3.1 Common Control Signals (Z, C, I)	341
18.3.2 Status Signals	341
18.3.3 Timing Signals	341
18.3.4 Data Signals	341
18.3.5 Address Signals	341
18.3.6 Command Signals	342
18.3.7 Pin Allocations	342
18.4 Dataway Operations	343
18.4.1 Dataway Timing	344
18.4.2 Block Transfers	346
18.5 Multi-Crate Systems – The Branch Highway	348
18.6 CAMAC Software	349
Appendix	353
A. A Review of Oscilloscope Functions	353
A.1 Basic Structure	353
A.1.1 Bandwidth and Risettime	353
A.2 Controls and Operating Modes	354
A.2.1 Input Coupling	354
A.2.2 Vertical and Horizontal Sensitivity	354
A.2.3 Triggering (Synchronization)	355
A.2.4 Display Modes	355
A.3 Applications and Examples	356
A.3.1 Signal Viewing	356
A.3.2 Comparison of Signals	356
B. Physical and Numerical Constants	357
C. Resistor Color Code	358
References	359
Subject Index	371
