POAN Research Group (Ed.)

New Aspects of Electromagnetic and Acoustic Wave Diffusion

With 31 Figures

Springer

Contents

1. Multiple Scattering of Light	1
1.1 Analogies between Light and Electrons?	
<i>Bart van Tiggelen and Ad Lagendijk</i>	3
1.2 Coherent Beam, Diffuse Beam and Speckles: the Old View	
<i>Bart van Tiggelen and Ad Lagendijk</i>	6
1.2.1 Coherent Beam	6
1.2.2 Diffuse Beam and Speckles	7
1.3 Diffusing-Wave Spectroscopy	
<i>Georg Maret and Roger Maynard</i>	11
1.3.1 Basic Physics	11
1.3.2 Specificity of Diffusing-Wave Spectroscopy	12
1.3.3 Foams and Liquid Crystals	14
1.3.4 Imaging with Diffusing-Wave Spectroscopy	15
1.3.5 Perspectives	16
1.4 Coherent Beam, Diffuse Beam and Speckles: A New View	16
1.4.1 Diffuse Beam: Coherent Backscattering and Localization	
<i>Roger Maynard, Bart van Tiggelen, Georg Maret, Ad Lagendijk and Diederik Wiersma</i>	17
1.4.2 Diffuse Beam: Photonic Hall Effect	
<i>Bart van Tiggelen and Geert Rikken</i>	22
1.4.3 Diffuse Beam: Optics in Nematic Liquid Crystals	
<i>Bart van Tiggelen and Roger Maynard</i>	24
1.4.4 Coherent Beam	
<i>Ad Lagendijk and Bart van Tiggelen</i>	24
1.4.5 Speckles	
<i>Bart van Tiggelen</i>	27
1.5 Multiple Scattering of Microwaves	
<i>Patrick Sebbah and Azriel Genack</i>	28
1.5.1 Experimental Approach	28
1.5.2 Correlation Functions in Space and Frequency	29
1.5.3 Phase Statistics	31

2. Optical Medical Diagnostics and Imaging	
<i>Jean Virmont and Guy Ledanois</i>	35
2.1 Overview of Optical Imaging in Tissues	35
2.1.1 Microscopy	36
2.1.2 Oximetry	38
2.1.3 Fluorescence and Tumors	38
2.1.4 Combining Ultrasonic and Light Waves	39
2.2 Optical Imaging of Thick Organs	40
2.2.1 Forward Problem	41
2.2.2 Inverse Problem	42
3. Effective-Medium and Coherent-Potential Approximation	
<i>Kurt Busch and Costas Soukoulis</i>	45
3.1 The New Effective-Medium Theory	45
3.2 Results for Long-Wavelength Limit	48
3.3 Results for Finite Frequencies	48
3.4 Study of the Localization Parameter	48
3.5 Discussion	50
4. Acoustic and Ultrasonic Propagation	51
4.1 Ultrasonic Wave Propagation in Random Media	
<i>Arnaud Derode, Mathias Fink, Philippe Roux</i>	
<i>and Jean-Louis Thomas</i>	51
4.1.1 Coherence Measurement and Aberration Compensation	51
4.1.2 Coherent Backscattering with Acoustic Waves	53
4.1.3 Time Reversal of Wave Propagation	55
4.2 Coherent Beam	
<i>Ping Sheng</i>	59
4.3 Transmission and Reflection of Acoustic Pulses	
by Randomly Layered Media	
<i>Jean-Pierre Fouque</i>	62
4.3.1 Transmitted Pulse	64
4.3.2 Reflected Signal	64
5. Lidar	
<i>François Nicolas and Pierre Flamant</i>	67
5.1 Historical Background	67
5.2 Principle	68
5.3 Incoherent Multiple Scattering	70
5.3.1 Single-Backscattering Approximation	71
5.3.2 Direct Problem	73
5.3.3 Inverse Problem	75
5.4 Coherent Backscattering	77

6. Applied Mathematics

<i>Jean Lacroix</i>	79
6.1 Localization Theory	79
6.1.1 One-Dimensional Lattice	80
6.1.2 Strong Localization is Very Unlikely	81
6.1.3 Strong Localization <i>a.s.</i> Occurs	81
6.1.4 The Multidimensional Lattice Case	82
6.1.5 Extensions	82
6.1.6 Mean Square Displacement	82
6.2 Defining Mass Operators for Random Systems	
<i>Adriaan Tip</i>	83
6.2.1 Introduction	83
6.2.2 An Operator Expression for the Mass Operator	84
6.2.3 Existence of $\Sigma(z)$	85

7. Seismology

<i>Michel Campillo, Ludovic Margerin and Keiiti Aki</i>	87
7.1 Specific Consequences of Elasticity	87
7.2 1D Problem	88
7.2.1 Acoustic Waves	89
7.2.2 Elastic Waves	90
7.3 Seismic Coda	92
7.3.1 Inhomogeneous Diffusion Models	94
7.3.2 Role of Polarization	96
7.4 Coherent Backscattering and Localization in Seismology	97
