H. M. Antia

Numerical Methods for Scientists and Engineers

Second edition

Birkhäuser Verlag
Basel · Boston · Berlin

CONTENTS

Preface	xi
Notation	xv
List of Computer Programs	xvi
1 Introduction	1
1.1 Errors in Numerical Computation	2
1.2 Truncation Error	4
1.3 Programming	7
Bibliography	14
Exercises	15
2 Roundoff Error	17
2.1 Number Representation	17
2.2 Roundoff Error	25
2.3 Error Analysis	35
2.4 Condition and Stability	45
Bibliography	53
Exercises	54
3 Linear Algebraic Equations	63
3.1 Introduction	64
3.2 Gaussian Elimination	67
3.3 Direct Triangular Decomposition	74
3.4 Error Analysis	81
3.5 Matrix Inversion	90
3.6 Singular Value Decomposition	91
3.7 Iterative Methods	100
Bibliography	104
Exercises	105
4 Interpolation	114
4.1 Polynomial Interpolation	115
4.2 Divided Difference Interpolation Formula	120

vi Contents

4.3	Hermite Interpolation	130
4.4	Cubic Spline Interpolation	132
4.5	B-splines	137
4.6	Rational Function Interpolation	142
4.7	Interpolation in Two or More Dimensions	148
4.8	Spline Interpolation in Two or More Dimensions	150
	Bibliography	153
	Exercises	153
5	Differentiation	160
5.1	Differentiation of Interpolating Polynomials	160
5.2	Method of Undetermined Coefficients	164
5.3	Extrapolation Method	168
	Bibliography	172
	Exercises	173
6	Integration	175
6.1	Newton-Cotes Quadrature Formulas	176
6.2	Extrapolation Methods	186
6.3	Gaussian Quadrature	193
6.4	Roundoff Error	198
6.5	Weight Function	201
6.6	Improper Integrals	209
6.7	Integration over Infinite Interval	220
6.8	Automatic Integration	224
6.9	Summation	235
6.10	Multiple Integrals	242
6.11	Rules Exact for Monomials	247
6.12	Monte Carlo Method	253
6.13	Equidistributed Sequences	259
	Bibliography	264
	Exercises	265
7	Nonlinear Algebraic Equations	277
7.1	Real Roots	278
7.2	Fixed-Point Iteration	282
7.3	Method of False Position	284
7.4	Secant Method	289
7.5	Newton-Raphson Method	293
7.6	Brent's Method	297
7.7	Complex Roots	302
7.8	Muller's Method	305
7.9	Quadrature Based Method	309

7.10	Real Roots of Polynomials	313
7.11	Laguerre's Method	316
7.12	Roundoff Error	320
7.13	Criterion for Acceptance of a Root	323
7.14	Ill-conditioning	326
7.15	System of Nonlinear Equations	330
7.16	Newton's Method	335
7.17	Broyden's Method	340
	Bibliography	342
	Exercises	343
8	Optimisation	354
8.1	Golden Section Search	356
8.2	Brent's Method	362
8.3	Methods Using Derivative	365
8.4	Minimisation in Several Dimensions	369
8.5	Quasi-Newton Methods	373
8.6	Direction Set Methods	380
8.7	Linear Programming	387
8.8	Simulated Annealing	398
	Bibliography	403
	Exercises	404
9	Functional Approximations	409
9.1	Choice of Norm and Model	410
9.2	Linear Least Squares	415
9.3	Nonlinear Least Squares	431
9.4	Least Squares Approximation in Two Dimensions	436
9.5	Discrete Fourier Transform	438
9.6	Fast Fourier Transform	443
9.7	FFT in Two or More Dimensions	452
9.8	Inversion of Laplace Transform	454
9.9	Padé Approximations	457
9.10	Chebyshev Expansions	463
9.11	Minimax Approximations	472
9.12	Discrete Minimax Approximations	481
9.13	L_1 -approximations	486
	Bibliography	488
	Exercises	490
10	Algebraic Eigenvalue Problem	502
10.1	Introduction	503
10.2	Power Method	507

viii Contents

10.3	Inverse Iteration	513
10.4	Eigenvalues of a Real Symmetric Matrix	520
10.5	The QL Algorithm	527
10.6	Reduction of a Matrix to Hessenberg Form	531
10.7	Lanczos Method	535
10.8	QR Algorithm for a Real Hessenberg Matrix	537
10.9	Roundoff Errors	543
	Bibliography	545
	Exercises	545
11	Ordinary Differential Equations	552
11.1	Initial Value Problem	553
11.2	Stability of Numerical Integration Methods	557
11.3	Predictor-Corrector Methods	565
11.4	Runge-Kutta Methods	579
11.5	Extrapolation Methods	587
11.6	Stiff Differential Equations	589
11.7	Boundary Value Problem	598
11.8	Finite Difference Methods	605
11.9	Eigenvalue Problem	613
11.10	Expansion Methods	620
11.11	Some Special Techniques	623
	Bibliography	627
	Exercises	628
12	Integral Equations	638
12.1	Introduction	639
12.2	Fredholm Equations of the Second Kind	642
12.3	Expansion Methods	649
12.4	Eigenvalue Problem	653
12.5	Fredholm Equations of the First Kind	657
12.6	Inverse Problems	661
12.7	Volterra Equations of the Second Kind	666
12.8	Volterra Equations of the First Kind	672
	Bibliography	675
	Exercises	676
13	Partial Differential Equations	682
13.1	Introduction	683
13.2	Diffusion Equation in Two Dimensions	687
13.3	General Parabolic Equation in Two Dimensions	697
13.4	Parabolic Equations in Several Space Variables	704
13.5	Wave Equation in Two Dimensions	708

13.6	General Hyperbolic Equations	714
13.7	Elliptic Equations	720
13.8	Successive Over-Relaxation Method	727
13.9	Alternating Direction Method	731
13.10	Fourier Transform Method	734
13.11	Finite Element Methods	736
	Bibliography	742
	Exercises	743
Appendix A: Answers and Hints		751
A.1	Introduction	751
A.2	Roundoff Error	752
A.3	Linear Algebraic Equations	758
A.4	Interpolation	763
A.5	Differentiation	767
A.6	Integration	769
A.7	Nonlinear Algebraic Equations	775
A.8	Optimisation	782
A.9	Functional Approximations	784
A.10	Algebraic Eigenvalue Problem	792
A.11	Ordinary Differential Equations	796
A.12	Integral Equations	800
A.13	Partial Differential Equations	802
	Bibliography	805
