INTERACTIVE QUANTUM MECHANICS

With CD-ROM, 90 Figures, and 319 Exercises

INCLUDES
CD-ROM

Springer

Contents

Preface	v
1 Introduction	1
1.1 Interquanta	1
1.2 The Structure of This Book	2
1.3 The Demonstrations	3
1.4 The Computer Laboratory	3
1.5 Literature	4
2 Free Particle Motion in One Dimension	5
2.1 Physical Concepts	5
2.1.1 Planck's Constant, Schrödinger's Equation for a Free Particle	5
2.1.2 The Wave Packet, Group Velocity, Normalization	6
2.1.3 Probability-Current Density, Continuity Equation	7
2.1.4 Quantile Position, Quantile Trajectory	8
2.1.5 Relation to Bohm's Equation of Motion	9
2.1.6 Analogies in Optics	10
2.2 A First Session with the Computer	12
2.2.1 Starting IQ	12
2.2.2 An Automatic Demonstration	12
2.2.3 A First Dialog	13
2.3 The Free Quantum-Mechanical Gaussian Wave Packet	14
2.3.1 The Subpanel Physics—Comp. Coord.	14
2.3.2 The Subpanel Physics—Wave Packet	15
2.3.3 The Subpanel Physics—Quantile	16
2.4 The Free Optical Gaussian Wave Packet	16
2.5 Quantile Trajectories	16
2.6 The Spectral Function of a Gaussian Wave Packet	18
2.7 The Wave Packet as a Sum of Harmonic Waves	19
2.8 Exercises	21

3	Bound States in One Dimension	24
3.1	Physical Concepts	24
3.1.1	Schrödinger's Equation with a Potential. Eigenfunctions. Eigenvalues	24
3.1.2	Normalization. Discrete Spectra. Orthonormality	25
3.1.3	The Infinitely Deep Square-Well Potential	25
3.1.4	The Harmonic Oscillator	26
3.1.5	The Step Potential	26
3.1.6	Time-Dependent Solutions	28
3.1.7	Harmonic Particle Motion. Coherent States. Squeezed States	28
3.1.8	Quantile Motion in the Harmonic-Oscillator Potential	29
3.1.9	Particle Motion in a Deep Square Well	29
3.2	Eigenstates in the Infinitely Deep Square-Well Potential and in the Harmonic-Oscillator Potential	31
3.3	Eigenstates in the Step Potential	33
3.4	Harmonic Particle Motion	35
3.5	Harmonic Oscillator: Quantile Trajectories	37
3.6	Particle Motion in the Infinitely Deep Square-Well Potential	38
3.7	Exercises	39
4	Scattering in One Dimension	45
4.1	Physical Concepts	45
4.1.1	Stationary Scattering States. Continuum Eigenstates and Eigenvalues. Continuous Spectra	45
4.1.2	Time-Dependent Solutions of the Schrödinger Equation	46
4.1.3	Right-Moving and Left-Moving Stationary Waves of a Free Particle	46
4.1.4	Orthogonality and Continuum Normalization of Stationary Waves of a Free Particle. Completeness	47
4.1.5	Boundary Conditions for Stationary Scattering Solutions in Step Potentials	48
4.1.6	Stationary Scattering Solutions in Step Potentials	49
4.1.7	Constituent Waves	50
4.1.8	Normalization of Continuum Eigenstates	50
4.1.9	Harmonic Waves in a Step Potential	50
4.1.10	Time-Dependent Scattering Solutions in a Step Potential	51
4.1.11	Transmission and Reflection. Unitarity. The Argand Diagram	52
4.1.12	The Tunnel Effect	53

4.1.13	Resonances	53
4.1.14	Phase Shifts upon Reflection at a Steep Rise or Deep Fall of the Potential	54
4.1.15	Transmission Resonances upon Reflection at 'More- and Less-Dense Media'	56
4.1.16	The Quantum-Well Device and the Quantum-Effect Device	57
4.1.17	Stationary States in a Linear Potential	58
4.1.18	Wave Packet in a Linear Potential	59
4.1.19	Quantile Motion in a Linear Potential	59
4.2	Stationary Scattering States in the Step Potential	60
4.3	Time-Dependent Scattering by the Step Potential	61
4.4	Transmission and Reflection. The Argand Diagram	64
4.5	Stationary Wave in a Linear Potential	66
4.6	Gaussian Wave Packet in a Linear Potential	67
4.7	Quantile Trajectories in a Linear Potential	68
4.8	Exercises	68
4.9	Analogies in Optics	78
4.10	Reflection and Refraction of Stationary Electromagnetic Waves	82
4.11	Time-Dependent Scattering of Light	84
4.12	Transmission, Reflection, and Argand Diagram for a Light Wave	86
4.13	Exercises	88
5	A Two-Particle System: Coupled Harmonic Oscillators	91
5.1	Physical Concepts	91
5.1.1	The Two-Particle System	91
5.1.2	Initial Condition for Distinguishable Particles	93
5.1.3	Time-Dependent Wave Functions and Probability Distributions for Distinguishable Particles	94
5.1.4	Marginal Distributions for Distinguishable Particles	94
5.1.5	Wave Functions for Indistinguishable Particles. Symmetrization for Bosons. Antisymmetrization for Fermions	95
5.1.6	Marginal Distributions of the Probability Densities of Bosons and Fermions	96
5.1.7	Normal Oscillations	96
5.2	Stationary States	97
5.3	Time Dependence of Global Variables	98
5.4	Joint Probability Densities	98
5.5	Marginal Distributions	100
5.6	Exercises	102

6	Free Particle Motion in Three Dimensions	107
6.1	Physical Concepts	107
6.1.1	The Schrödinger Equation of a Free Particle in Three Dimensions. The Momentum Operator	107
6.1.2	The Wave Packet. Group Velocity. Normalization. The Probability Ellipsoid	109
6.1.3	Angular Momentum. Spherical Harmonics	111
6.1.4	The Stationary Schrödinger Equation in Polar Coordinates. Separation of Variables. Spherical Bessel Functions. Continuum Normalization. Completeness	113
6.1.5	Partial-Wave Decomposition of the Plane Wave	114
6.1.6	Partial-Wave Decomposition of the Gaussian Wave Packet	114
6.2	The 3D Harmonic Plane Wave	117
6.3	The Plane Wave Decomposed into Spherical Waves	119
6.4	The 3D Gaussian Wave Packet	120
6.5	The Probability Ellipsoid	121
6.6	Angular-Momentum Decomposition of a Wave Packet	122
6.7	Exercises	123
7	Bound States in Three Dimensions	126
7.1	Physical Concepts	126
7.1.1	The Schrödinger Equation for a Particle under the Action of a Force. The Centrifugal Barrier. The Effective Potential	126
7.1.2	Bound States. Scattering States. Discrete and Continuous Spectra	128
7.1.3	The Infinitely Deep Square-Well Potential	129
7.1.4	The Spherical Step Potential	130
7.1.5	The Harmonic Oscillator	133
7.1.6	The Coulomb Potential. The Hydrogen Atom	134
7.1.7	Harmonic Particle Motion	135
7.2	Radial Wave Functions in Simple Potentials	136
7.3	Radial Wave Functions in the Step Potential	140
7.4	Probability Densities	141
7.5	Contour Lines of the Probability Density	144
7.6	Contour Surface of the Probability Density	145
7.7	Harmonic Particle Motion	146
7.8	Exercises	147

8	Scattering in Three Dimensions	152
8.1	Physical Concepts	152
8.1.1	Radial Scattering Wave Functions	152
8.1.2	Boundary and Continuity Conditions. Solution of the System of Inhomogeneous Linear Equations for the Coefficients	154
8.1.3	Scattering of a Plane Harmonic Wave	155
8.1.4	Scattering Amplitude and Phase. Unitarity. The Argand Diagram	159
8.1.5	Coulomb Scattering	160
8.2	Radial Wave Functions	162
8.3	Stationary Wave Functions and Scattered Waves	164
8.4	Differential Cross Sections	166
8.5	Scattering Amplitude. Phase Shift. Partial and Total Cross Sections	167
8.6	Coulomb Scattering: Radial Wave Function	170
8.7	Coulomb Scattering: 3D Wave Function	172
8.8	Exercises	173
9	Special Functions of Mathematical Physics	179
9.1	Basic Formulae	179
9.1.1	Hermite Polynomials	179
9.1.2	Harmonic-Oscillator Eigenfunctions	180
9.1.3	Legendre Polynomials and Legendre Functions	180
9.1.4	Spherical Harmonics	181
9.1.5	Bessel Functions	182
9.1.6	Spherical Bessel Functions	183
9.1.7	Airy Functions	184
9.1.8	Laguerre Polynomials	185
9.1.9	Radial Eigenfunctions of the Harmonic Oscillator	185
9.1.10	Radial Eigenfunctions of the Hydrogen Atom	186
9.1.11	Gaussian Distribution and Error Function	186
9.1.12	Binomial Distribution and Poisson Distribution	187
9.2	Hermite Polynomials and Related Functions	188
9.3	Legendre Polynomials and Related Functions	189
9.4	Spherical Harmonics: Surface over Cartesian Grid	190
9.5	Spherical Harmonics: 2D Polar Diagram	191
9.6	Spherical Harmonics: Polar Diagram in 3D	192
9.7	Bessel Functions and Related Functions	193
9.8	Bessel Function and Modified Bessel Function with Real Index	194
9.9	Airy Functions	195
9.10	Laguerre Polynomials	195

9.11	Laguerre Polynomials as Function of x and the Upper Index α	197
9.12	Gaussian Distribution	198
9.13	Error Function and Complementary Error Function	199
9.14	Binomial Distribution	199
9.15	Poisson Distribution	200
9.16	Simple Functions of a Complex Variable	201
9.17	Exercises	204
10	Additional Material and Hints for the Solution of Exercises	206
10.1	Units and Orders of Magnitude	206
10.1.1	Definitions	206
10.1.2	SI Units	206
10.1.3	Scaled Units	207
10.1.4	Atomic and Subatomic Units	208
10.1.5	Data-Table Units	209
10.1.6	Special Scales	211
10.2	Argand Diagrams and Unitarity for One-Dimensional Problems	212
10.2.1	Probability Conservation and the Unitarity of the Scattering Matrix	212
10.2.2	Time Reversal and the Scattering Matrix	214
10.2.3	Diagonalization of the Scattering Matrix	215
10.2.4	Argand Diagrams	217
10.2.5	Resonances	218
10.3	Hints and Answers to the Exercises	221
A	A Systematic Guide to IQ	248
A.1	Overview	248
A.1.1	Starting IQ	248
A.1.2	Introductory Demonstration	248
A.1.3	Selecting a Descriptor File	249
A.1.4	Selecting a Descriptor and Producing a Plot	249
A.1.5	Printing a Plot	251
A.1.6	Changing Colors and Line Widths	251
A.1.7	Changing Parameters	253
A.1.8	Saving a Changed Descriptor	254
A.1.9	Creating a Mother Descriptor	255
A.1.10	Editing Descriptor Files	255
A.1.11	Printing a Set of Plots	257
A.1.12	Running a Demonstration	257
A.1.13	Customizing	258
A.1.14	Help and Context-Sensitive Help	261
A.2	Coordinate Systems and Transformations	261

A.2.1	The Different Coordinate Systems	261
A.2.2	Defining the Transformations	262
A.3	The Different Types of Plot	266
A.3.1	Surface over Cartesian Grid in 3D	266
A.3.2	Surface over Polar Grid in 3D	267
A.3.3	2D Function Graph	269
A.3.4	Contour-Line Plot in 2D	271
A.3.5	Contour-Surface Plot in 3D	272
A.3.6	Polar Diagram in 3D	273
A.3.7	Probability-Ellipsoid Plot	275
A.3.8	3D Column Plot	275
A.4	Parameters – The Subpanel Physics	276
A.4.1	The Subpanel Physics—Comp. Coord.	277
A.4.2	The Subpanel Multiple Plot	277
A.5	Parameters – The Subpanel Graphics	277
A.5.1	The Subpanel Graphics—Geometry	277
A.5.2	The Subpanel Graphics—Accuracy	278
A.5.3	The Subpanel Graphics—Hidden Lines	279
A.6	The Subpanel Background	280
A.6.1	The Subpanel Background—Box	280
A.6.2	The Subpanel Background—Scales	282
A.6.3	The Subpanel Background—Arrows	283
A.6.4	The Subpanel Background—Texts	285
A.7	Parameters – The Subpanel Format	286
A.8	Coding Mathematical Symbols and Formulae	286
A.9	A Combined Plot and its Mother Descriptor	288
A.9.1	The Subpanel Type and Format	288
A.9.2	The Subpanel Table of Descriptors	289
A.9.3	Special Cases	290
A.10	Details of Printing	290
A.10.1	Preview, Colors and Line Widths	290
A.10.2	Using a System Printer	291
A.10.3	Creating PostScript Files: IQ Export	292
A.11	Preparing a Demonstration	293
B	How to Install IQ	295
B.1	Contents of the CD-ROM	295
B.2	Computer Systems on which INTERQUANTA Can Be Used	295
B.3	Installation with Options. The File ReadMe.txt	296
B.4	Quick Installation for the Impatient User	296
	Index	299
