Pensacola Junior College has scheduled the first freshman course to be offered in the Nuclear Science program beginning February 1st. The course will be taught by Dr. E. F. McCracken, dean of the college's School of Science.

Pensacola Junior College will offer a course in Nuclear Science beginning February 1st. The course will be taught by Dr. E. F. McCracken, dean of the school of science.

The course will cover the basic principles of nuclear physics, including the structure of the atom, the properties of subatomic particles, and the processes of nuclear reactions. Students will also learn about the applications of nuclear science in fields such as medicine, energy, and industry.

The course will be offered on a three-credit-hour basis. Prerequisites for the course include a strong background in high school physics and mathematics.

The course will meet twice a week, with lectures and lab sessions. Students will have the opportunity to work with state-of-the-art equipment in the college's nuclear science laboratory.

The course is open to all students who meet the prerequisites, regardless of major. However, students interested in pursuing a career in the nuclear science field are strongly encouraged to enroll.

For more information about the Nuclear Science course at Pensacola Junior College, please contact Dr. E. F. McCracken, dean of the school of science, at (904) 458-8222.
