An Introduction to
Programming
with
Mathematica®

Third Edition

PAUL R. WELLIN | RICHARD J. GAYLORD | SAMUEL N. KAMIN

Contents

Preface · *xi*

1 **An introduction to *Mathematica***

1.1 A brief overview of *Mathematica* · 1

Numerical computations · Symbolic computations · Graphics · Working with data · Programming · Symbolic and interactive documents

1.2 Using *Mathematica* · 15

Getting into and out of Mathematica · The syntax of inputs · Alternate input syntax · The front end and the kernel · Errors · Getting help · The Help Browser

2 **The *Mathematica* language**

2.1 Expressions · 31

Introduction · Internal forms of expressions · Atoms · The structure of expressions · Exercises

2.2 Definitions · 37

Defining variables and functions · Immediate vs. delayed assignments · The global rule base · Piecewise-defined functions · Functions with multiple definitions · Exercises

2.3 Predicates and Boolean operations · 45

Predicates · Relational and logical operators · Exercises

2.4 Attributes · 50

3 Lists

3.1 Introduction · 53

3.2 Creating and measuring lists · 55

List construction · Measuring lists · Exercises

3.3 Manipulating lists · 60

Testing a list · Extracting elements · Rearranging lists · List component assignment · Exercises

3.4 Working with several lists · 69

Exercises

3.5 Strings and characters · 70

Exercises

4 Functional programming

4.1 Introduction · 75

4.2 Functions for manipulating expressions · 77

Map · Thread and MapThread · The Listable attribute · Apply · Inner and Outer · Exercises

4.3 Iterating functions · 86

Exercises

4.4 Programs as functions · 88

User-defined functions · Building up programs · Exercises

4.5 Auxiliary functions · 96

Compound functions · Localizing names: Module · Localizing values: Block · Localizing constants: With · Exercises

4.6 Pure functions · 102

Exercises

4.7 One-liners · 107

Hamming distance · The Josephus problem · Pocket change · Exercises

5 Procedural programming

5.1 Introduction · 115

5.2 Loops and iteration · 116

Newton's method · Do loops · While loops · NestWhile and NestWhileList · Exercises

5.3 Flow control · 131

Conditional functions · Multiclaue definitions · Which and Switch · Piecewise · Argument checking · Summary · Exercises

5.4 Examples · 142

Sieve of Eratosthenes · Classifying points · Exercises

6 Rule-based programming

6.1 Introduction · 149

6.2 Patterns · 151

Blanks · Sequence pattern matching · Example: Finding subsequences · Conditional pattern matching · Alternatives · String patterns · Exercises

6.3 Transformation rules · 164

Introduction · Example: Counting coins · Example: Finding maxima · Exercises

6.4 Examples · 170

Encoding text · Sorting a list · Exercises

7 Recursion

7.1 Fibonacci numbers · 177

Exercises

7.2 List functions · 180

Exercises

7.3 Thinking recursively: examples · 183

Finding maxima · Subsets · Run-length encoding · Exercises

7.4 Recursion and symbolic computations · 192

Exercises

7.5 Classical examples · 198

Merge sort · Gaussian elimination · Trees · Huffman encoding · Exercises

7.6 Dynamic programming · 216*Exercises***7.7 Higher-order functions and recursion · 219***Exercises***8 Numerics****8.1 Introduction · 221****8.2 Numbers · 224***Types of numbers · Digits and number bases · Random numbers · Exercises***8.3 Working with numbers · 234***Precision and accuracy · Representation of approximate numbers · Exact vs. approximate numbers · High precision vs. machine precision · Roundoff errors · Computing with different number types · Exercises***8.4 Working with arrays of numbers · 247***Sparse arrays · Packed arrays · Exercises***8.5 Numerical computations · 253***Working with precision and accuracy · Newton's method revisited · Gaussian elimination revisited · Exercises***9 Graphics programming****9.1 Structure of graphics · 269***Primitives, directives, and options · Exercises***9.2 Graphics programming · 279***Root plotting · Plotting data · Simple closed paths · Drawing trees · Exercises***9.3 Sound · 298***The sound of mathematics · White noise, white music · Brownian music · Exercises***10 Front end programming****10.1 Introduction · 309****10.2 The structure of cells and notebooks · 310***Notebook expressions · Manipulating notebooks · Exercises*

10.3 Cell data types · 319

TextData · BoxData · GraphicsData · Exercises

10.4 GridBoxes · 324

ShowTable · TriangleForm · Exercises

10.5 Buttons · 331

Making buttons the easy way · The structure of buttons · ButtonStyle · ButtonFunction · Example: An evaluate button · Exercises

11 Examples and applications

11.1 Manipulating data files · 341

Introduction · Getting the data into Mathematica · Examining the data file · Extracting and converting data · Visualizing the data · Exercises

11.2 Random walks · 351

Introduction · The one-dimensional random walk · The two-dimensional random walk · Visualizing the random walk · The three-dimensional random walk · Adding options and defaults · Error-trapping and messaging · Creating Help Browser documentation · Exercises

11.3 The Game of Life · 366

Exercises

11.4 Implementing languages · 374

Introduction to PDL · Syntax · Parsing · Lexical analysis · Computing shapes

12 Writing packages

12.1 Introduction · 395

12.2 Using packages · 396

Loading packages · Finding out what is in a package · Avoiding name collisions

12.3 Contexts · 401

12.4 The elements of packages · 406

12.5 Writing your own packages · 408

The RandomWalks package · Exercises

Appendix A How expressions are evaluated · 417**Appendix B Debugging · 420****References · 427****Solutions to exercises****2 The *Mathematica* language · 431****3 Lists · 434****4 Functional programming · 441****5 Procedural programming · 459****6 Rule-based programming · 468****7 Recursion · 480****8 Numerics · 492****9 Graphics programming · 503****10 Front end programming · 522****11 Examples and applications · 5291****12 Writing packages · 537****Index · 539**
