WHY AND HOW TO MAKE CONSTITUENT AND CURRENT QUARKS DIFFERENT

- AND THEN FORGET THEM BOTH

E R R A T U M

Contrary to the statement made after Eq. (10.7), the inequality $|G_A|G_V| < 5/3$ does follow from the general considerations of Section 8. To see this it is only necessary to consider the commutator

$$[\tilde{Q}_3^{K^+}, \tilde{Q}_3^{K^-}] = I_3 + \frac{3}{2} Y$$

[where $\tilde{Q}_3^{K^\pm}$ is defined by the right-hand side of (9.2a) with $\alpha = K^\pm$] between protons and then observe that there are no positive strangeness baryons.
