DECISIONS OF THE THIRTY-THIRD MEETING
OF THE NUCLEAR PHYSICS RESEARCH COMMITTEE
HELD ON 6 MAY, 1964

1. Procedure

The minutes of the last meeting were approved (NPRC 32, 15.4.1964). Experiment T86 will be carried out in the second half of May after a specified number of pictures have been taken for the neutrino calibration run.

2. Situation at the PS

Lock and Munday reported that good machine operation was resumed rather quickly after the April shut-down. Both counter experiments in the East Area (S24 and S26) were now taking data, while the setting up of the new beams in the North Hall ($k_4$ and $a_b$) had progressed well. The new beams in the South Hall ($m_4$ and $q_3$) should be ready by the end of May.

3. Future beam situation

There was a first discussion on possible beam layouts for the end of 1964 and the beginning of 1965, with particular reference to the possible needs of the CERN 2-metre bubble chamber.

4. Next meeting

June 10 at 9.30 a.m.

W.O. Lock
