**Contents**

*Preface to the second edition*  
*Preface to the first edition*

**Part I Basics of CP violation**  

1  
**Prologue**

2  
**Prelude: C, P and T in classical dynamics**

2.1 Classical mechanics

2.1.1 Parity

2.1.2 Time reversal

2.2 Electrodynamics

2.2.1 Charge conjugation

2.2.2 Parity

2.2.3 Time reversal

2.3 Résumé

Problems

3  
**C, P and T in non-relativistic quantum mechanics**

3.1 Parity

3.2 Charge conjugation

3.3 Time reversal

3.4 Kramers’ degeneracy

3.5 Detailed balance

3.6 Electric dipole moments

3.6.1 The neutron EDM

3.6.2 Water molecules and atoms

3.6.3 Dumb-bells

3.6.4 Schiff’s theorem
3.7 Résumé 38
Problems 38

4 C, P and T in relativistic quantum theories 41
4.1 Notation 42
4.2 Spin-1 fields 43
4.3 Spin-0 fields 46
4.3.1 Parity 46
4.3.2 Charge conjugation 47
4.3.3 Time reversal 47
4.4 Spin-1/2 fields 48
4.4.1 Parity 49
4.4.2 Charge conjugation 51
4.4.3 Time reversal 52
4.5 CP and CPT transformations 53
4.6 Some consequences of the CPT theorem 56
4.7 ♠ Back to first quantization ♠ 58
4.8 ♠ Phase conventions for C and P ♠ 59
4.9 ♠ Internal symmetries ♠ 60
4.10 The role of final state interactions 62
4.10.1 T invariance and Watson’s theorem 62
4.10.2 Final state interactions and partial widths 64
4.10.3 ♠ T symmetry and final state interactions ♠ 67
4.11 Résumé and outlook 69
Problems 70

5 The arrival of strange particles 73
5.1 The discovery of strange particles 73
5.2 The $\theta - \tau$ puzzle 75
5.3 The $\Delta I = \frac{1}{2}$ rule 76
5.4 The existence of two different neutral kaons 77
5.5 CP invariant $K^0 - \bar{K}^0$ oscillations 79
5.6 Regeneration – which is heavier: $K_L$ or $K_S$? 83
5.7 The quiet before the storm 84
5.8 The discovery of CP violation 85
Problems 89

6 Quantum mechanics of neutral particles 90
6.1 The effective Hamiltonian 90
6.2 Constraints from CPT, CP and T 93
6.3 Spherical coordinates 93
6.4 ♠ On phase conventions ♠ 95
6.5 ♠ $\Delta M$ and $\Delta \Gamma$ ♠ 97
6.6 Master equations of time evolution 99
6.7 CP violation: classes (A), (B) and (C) 102
6.8 ♠ On the sign of the CP asymmetry ♠ 106
6.9 What happens if you don’t observe the decay time? 107
6.10 Regeneration 108
6.11 The Bell–Steinberger inequality 110
6.12 Résumé on $P^0 - \bar{P}^0$ oscillations 111
Problems 113

Part II  Theory and experiments 115

7  The quest for CP violation in $K$ decays – a marathon 117
7.1 The landscape 117
7.2 $K_L \to \pi\pi$ decays 121
  7.2.1 Decay amplitudes 121
  7.2.2 Constraints on $A_1$ and $\bar{A}_1$ 124
  7.2.3 Relating $\epsilon$ to $M - \frac{i}{2} \Gamma$ 125
  7.2.4 The phase of $\epsilon$ 126
7.3 Semileptonic decays 127
7.4 $\blacklozenge P_L$ in $K \to \pi\mu\nu$ decays $\blacklozenge$ 129
7.5 $\blacklozenge K \to 3\pi \blacklozenge$
  7.5.1 $K_S \to 3\pi^0$ 133
  7.5.2 $K_S \to \pi^+\pi^-\pi^0$ 133
  7.5.3 $K^\pm \to \pi^\pm\pi^\pm\pi^0$ 138
7.6 $\blacklozenge$ Hyperon decays $\blacklozenge$
7.7 The bard’s song 141
Problems 141

8  The KM implementation of CP violation 143
8.1 A bit of history 143
8.2 The Standard Model 145
  8.2.1 QCD 146
  8.2.2 The Glashow–Salam–Weinberg model 147
8.3 The KM ansatz 149
  8.3.1 The mass matrices 149
  8.3.2 Parameters of consequence 149
  8.3.3 Describing weak phases through unitarity triangles 151
8.4 A tool kit 154
  8.4.1 The angles of the unitarity triangle 156
8.5 The pundits’ judgement 157
Problems 158

9  The theory of $K_L \to \pi\pi$ decays 160
9.1 The $\Delta S = 1$ non-leptonic Lagrangian 160
9.2 Evaluating matrix elements 164
9.3 Chiral symmetry and vacuum saturation approximation 165
9.4 $K \to \pi\pi$ decays 167
9.5  ♠ Computation of $\epsilon'/\epsilon$ ♠
    9.5.1 Determining matrix elements from data  169
    9.5.2 Numerical estimates  170
9.6 $\Delta S = 2$ amplitudes  172
    9.6.1 $\Delta M_K$  174
    9.6.2 $\epsilon$  175
9.7  ♠ SM expectations for $\langle P_\perp \rangle$ in $K_{i3}$ decays ♠  175
9.8 Résumé  176
Problems  177

10 Paradigmatic discoveries in $B$ physics  180
    10.1 The emerging beauty of $B$ hadrons  180
        10.1.1 The discovery of beauty  181
        10.1.2 The longevity of $B$ mesons  183
        10.1.3 The fluctuating identity of neutral $B$ mesons  185
        10.1.4 Another triumph for CKM dynamics  189
    10.2 What does the SM say about oscillations?  190
        10.2.1 Computation of $\Delta M$  190
    10.3 ♠ On the sign of $\Delta M_B$ ♠  192
    10.4 CP violation in $B$ decays – like in $K$ decays, only different  193
    10.5 From sweatshops to beauty factories  197
        10.5.1 Disappointment at a symmetric machine  199
        10.5.2 A crazy idea  199
    10.6 First reward – $B_d \to \psi K_S$  200
    10.7 The second reward – $B_d \to \pi^+\pi^-$  201
    10.8 More rewards – $B^0 \to K\pi$, $\eta'K_S$  203
        10.8.1 $B \to K\pi$  203
        10.8.2 $B_d \to \eta'K_S$  205
    10.9 CPT invariance vs. $T$ and CP violation  206
    10.10 Reflections  207
        10.10.1 On the virtue of ‘over-designing’  207
        10.10.2 The ‘unreasonable’ success of CKM theory  208
        10.10.3 Praising hadronization  209
        10.10.4 EPR correlations – a blessing in disguise  210
    10.11 Résumé  211
Problems  212

11 Let the drama unfold – $B$ CP phenomenology  215
    11.1 Pollution from water fowls and others  215
    11.2 Determining $\phi_1$  218
        11.2.1 How clean is $B_d \to \psi K_S$?  218
        11.2.2 ♠ Other ways to get at $\phi_1$ ♠  219
11.3 Determining $\phi_2$

11.3.1 Penguins in $B_d \to \pi\pi$ 222

11.3.2 Overcoming pollution 222

11.3.3 $B \to \pi\pi$ 223

11.3.4 $B \to \pi\rho, \rho\rho$ 224

11.4 Determining $\phi_3$

11.4.1 Using doubly Cabibbo-suppressed decays 228

11.4.2 Dalitz plot analysis 228

11.5 Search for New Physics

11.5.1 Wrong-sign semileptonic decays: Class(B) 230

11.5.2 ♠ Theoretical estimate of $A_{SL}$ ♠ 230

11.5.3 What can oscillations tell us about New Physics? 235

11.5.4 $B_s \to \psi\phi, \psi\eta(0), D_s^+D_s^-$: Class (C2) 236

11.5.5 $B_s \to K_S\rho^0$: Class (C1, C2) 238

11.5.6 $B_d \to \phi K_S, \eta K_S$: Class(C2) 238

11.5.7 $B_s \to D^\pm s \pm K$: Class (C1,C2) 240

11.6 Résumé

Problems 242

12 Rare $K$ and $B$ decays – almost perfect laboratories 248

12.1 Rare $K$ decays

12.1.1 $K_L \to \mu^+\mu^-$ and $K^+ \to \pi^+e^+e^-$ 248

12.1.2 $K_L \to \pi^0l^+l^-$ 250

12.1.3 $K \to \pi\nu\bar{\nu}$ 251

12.1.4 ♠ $K \to \pi\pi\gamma^\ast$ ♠ 254

12.2 Beauty decays

12.2.1 $B \to X_s\gamma$ 258

12.2.2 $B \to \mu^+\mu^-$ 259

12.2.3 $B \to X + \nu\bar{\nu}$ 260

12.2.4 $B \to X_s + \mu^+\mu^-$ 261

12.3 Résumé

Problems 262

13 ♠ CPT violation – could it be in $K$ and $B$ decays? ♠ 265

13.1 Equality of masses and lifetimes 266

13.2 Theoretical scenarios 267

13.3 CPT phenomenology for neutral kaons 268

13.3.1 Semileptonic decays 269

13.3.2 Asymmetries 270

13.3.3 Non-leptonic neutral $K$ decays 273

13.4 Harnessing EPR correlations

13.4.1 $\phi$ factory 279

13.4.2 Tests of CPT symmetry in $B$ decays 281
## Contents

13.5 The moralist's view  
Problems  

### 14 CP violation in charm decays – the dark horse  

14.1 On the uniqueness of charm  
14.2 $D^0 - \bar{D}^0$ oscillations  
  14.2.1 Experimental evidence  
  14.2.2 First résumé  
  14.2.3 Theoretical expectations on $\Delta M_D$ & $\Delta \Gamma_D$  
  14.2.4 New Physics contributions to $\Delta M_D$ and $\Delta \Gamma_D$?  
  14.2.5 ♠ Numerical predictions for $\Delta M_D$ and $\Delta \Gamma_D$ ♠  
14.3 CP violation  
  14.3.1 Preliminaries  
  14.3.2 CP asymmetries with out $D^0 - \bar{D}^0$ oscillations  
  14.3.3 Oscillations – the new portal to CP violation  
  14.3.4 Harnessing EPR correlations  
14.4 Résumé and a call to action  
Problems  

### 15 The strong CP problem  

15.1 The problem  
15.2 Why $G \cdot \bar{G}$ matters and $F \cdot \bar{F}$ does not  
15.3 ♠ The $U(1)_A$ problem ♠  
15.4 QCD and quark masses  
15.5 The neutron electric dipole moment  
15.6 Are there escape hatches?  
  15.6.1 Soft CP violation  
15.7 Peccei–Quinn symmetry  
15.8 The dawn of axions – and their dusk?  
  15.8.1 Visible axions  
  15.8.2 Invisible axions  
15.9 The pundits' judgement  
Problems  

### Part III  Looking beyond the Standard Model  

16 Quest for CP violation in the neutrino sector  
16.1 Experiments  
  16.1.1 Solar neutrinos  
  16.1.2 Atmospheric neutrinos  
  16.1.3 Man-made neutrinos  
  16.1.4 Qualitative summary

19.3 Gateways for CP violation
  19.3.1 A first glance at CP phases in MSSM 421
  19.3.2 Squark mass matrices 422
  19.3.3 Beyond MSSM 425

19.4 Confronting experiments
  19.4.1 Electric dipole moments 426
  19.4.2 SUSY contributions to \( \Delta S \neq 0 \neq \Delta B \) transitions 428
  19.4.3 Bounds on MI SUSY parameters 431
  19.4.4 Can SUSY be generic? 432

19.5 The pundits’ résumé 433
Problems 434

20 Minimal flavour violation and extra dimensions 436
20.1 On minimal flavour violation 436
  20.1.1 Defining, implementing and probing MFV 437
20.2 Extra (space) dimensions 440
20.3 The pundits’ call 443

21 Baryogenesis in the universe 444
21.1 The challenge 444
21.2 The ingredients 445
21.3 GUT baryogenesis 446
21.4 Electroweak baryogenesis 448
21.5 Leptogenesis driving baryogenesis 451
21.6 Wisdom – conventional and otherwise 452

Part IV Summary 455

22 Summary and perspectives 457
22.1 The cathedral builder’s paradigm 459
  22.1.1 Present status and general expectations 460
  22.1.2 A look back 461
22.2 Agenda for the future 462
22.3 Final words 463
