3. **Data Contracts** .......................................................... 89
   Serialization ...................................................................... 89
      .NET Serialization .......................................................... 91
      The WCF Formatters ....................................................... 93
      Data Contract via Serialization ........................................ 95
   Data Contract Attributes .................................................. 97
      Importing a Data Contract ............................................... 99
      Data Contracts and the Serializable Attribute .................. 103
      Inferred Data Contracts ................................................ 104
      Composite Data Contracts .............................................. 106
      Data Contract Events .................................................... 107
      Shared Data Contracts .................................................. 110
   Data Contract Hierarchy .................................................. 110
      Known Types .................................................................. 111
      Service Known Types .................................................... 113
      Multiple Known Types ................................................. 115
      Configuring Known Types ............................................. 116
      Objects and Interfaces .................................................. 117
   Data Contract Equivalence .............................................. 119
      Serialization Order ....................................................... 120
   Versioning ....................................................................... 122
      New Members .................................................................. 122
      Missing Members .......................................................... 123
      Versioning Round-Trip .................................................. 127
   Enumerations .................................................................... 130
   Delegates and Data Contracts ......................................... 132
   Data Sets and Tables ....................................................... 132
      Using Arrays Instead of Tables ....................................... 135
      Using LINQ to SQL ........................................................ 138
   Generics .......................................................................... 140
   Collections ...................................................................... 143
      Concrete Collections ..................................................... 144
      Custom Collections ...................................................... 146
      The CollectionDataContract Attribute ......................... 147
      Referencing a Collection ............................................... 148
      Dictionaries ................................................................... 149
4. **Instance Management** ........................................ 152
   Behaviors ................................................................ 152
   Per-Call Services ................................................... 154
     Benefits of Per-Call Services ................................ 154
     Configuring Per-Call Services ................................ 155
     Per-Call Services and Transport Sessions .............. 156
     Designing Per-Call Services .................................. 157
     Choosing Per-Call Services ................................... 160
   Per-Call Services .................................................. 160
     Configuring Private Sessions .............................. 161
     Sessions and Reliability ...................................... 165
     The Session ID .................................................. 167
     Session Termination .......................................... 168
   Singleton Service ................................................ 169
     Initializing a Singleton ...................................... 170
     Choosing a Singleton ........................................ 173
   Demarcating Operations ....................................... 173
   Instance Deactivation .......................................... 176
     Configuring with ReleaseInstanceMode.None .......... 177
     Configuring with ReleaseInstanceMode.BeforeCall ... 178
     Configuring with ReleaseInstanceMode.AfterCall ...... 179
     Configuring with ReleaseInstanceMode.BeforeAndAfterCall 179
     Explicit Deactivation ....................................... 180
     Using Instance Deactivation ............................... 181
   Durable Services ................................................ 181
     Durable Services and Instance Management Modes ... 182
     Instance IDs and Durable Storage ....................... 182
     Explicit Instance IDs ....................................... 184
     Instance IDs in Headers .................................... 186
     Context Bindings for Instance IDs ...................... 188
     Automatic Durable Behavior ............................... 194
   Throttling .......................................................... 200
     Configuring Throttling ..................................... 203
     Throttled Connections in the Binding ................... 208
# 5. Operations

- Request-Reply Operations
- One-Way Operations
  - Configuring One-Way Operations
  - One-Way Operations and Reliability
  - One-Way Operations and Sessionful Services
  - One-Way Operations and Exceptions
- Callback Operations
  - The Callback Contract
  - Client Callback Setup
  - Service-Side Callback Invocation
  - Callback Connection Management
  - The Duplex Proxy and Type Safety
  - The Duplex Factory
  - Callback Contract Hierarchy
  - Callbacks, Ports, and Channels
- Events
- Streaming
  - I/O Streams
  - Streaming and Binding
  - Streaming and Transport
  - Stream Management

# 6. Faults

- Error Isolation and Decoupling
  - Error Masking
  - Channel Faulting
- Fault Propagation
  - Fault Contracts
  - Fault Debugging
  - Faults and Callbacks
- Error-Handling Extensions
  - Providing a Fault
  - Handling a Fault
  - Installing Error-Handling Extensions
  - The Host and Error Extensions
  - Callbacks and Error Extensions
# 7. Transactions

The Recovery Challenge 281

Transactions 282

- Transactional Resources 283
- Transaction Properties 283
- Transaction Management 285
- WCF Resource Managers 289

Transaction Propagation 289

- Transaction Flow and Bindings 289
- Transaction Flow and the Operation Contract 290
- One-Way Calls 293

Transaction Protocols and Managers 293

- Protocols and Bindings 294
- Transaction Managers 295
- Transaction Manager Promotion 298

The Transaction Class 299

- The Ambient Transaction 300
- Local Versus Distributed Transactions 300

Transactional Service Programming 302

- Setting the Ambient Transaction 302
- Transaction Propagation Modes 304
- Voting and Completion 312
- Transaction Isolation 316
- Transaction Timeout 318

Explicit Transaction Programming 320

- The TransactionScope Class 320
- Transaction Flow Management 322
- Non-Service Clients 329

Service State Management 331

- The Transaction Boundary 332

Instance Management and Transactions 332

- Per-Call Transactional Services 334
- Per-Session Transactional Services 337
- Transactional Durable Services 352
- Transactional Behavior 354
- Transactional Singleton Service 360
- Instancing Modes and Transactions 364
Asynchronous Invocation 431
Polling or Waiting for Completion 433
Completion Callbacks 436
One-Way Asynchronous Operations 441
Asynchronous Error Handling 442
Asynchronous Calls and Transactions 443
Synchronous Versus Asynchronous Calls 444

9. Queued Services ................................................................. 446
Disconnected Services and Clients 446
Queued Calls 447
Queued Calls Architecture 448
Queued Contracts 449
Configuration and Setup 450
Transactions 457
Delivery and Playback 457
Service Transaction Configuration 459
Nontransactional Queues 462
Instance Management 463
Per-Call Queued Services 463
Sessionful Queued Services 465
Singleton Service 469
Concurrency Management 471
Throttling 471
Delivery Failures 472
The Dead-Letter Queue 473
Time to Live 474
Configuring the Dead-Letter Queue 474
Processing the Dead-Letter Queue 476
Playback Failures 480
Poison Messages 481
Poison Message Handling in MSMQ 4.0 482
Poison Message Handling in MSMQ 3.0 486
Queued Versus Connected Calls 486
Requiring Queuing 487
The Response Service 489
  Designing a Response Service Contract 490
  Client-Side Programming 494
  Queued Service-Side Programming 496
  Response Service-Side Programming 499
  Transactions 500

The HTTP Bridge 503
  Designing the Bridge 504
  Transaction Configuration 504
  Service-Side Configuration 505
  Client-Side Configuration 507

10. Security .......................................................... 509
  Authentication 509
  Authorization 510
  Transfer Security 511
    Transfer Security Modes 511
    Transfer Security Mode Configuration 513
    Transport Security and Credentials 516
    Message Security and Credentials 517
  Identity Management 518
  Overall Policy 518
  Scenario-Driven Approach 519
  Intranet Application Scenario 520
    Securing the Intranet Bindings 520
    Constraining Message Protection 527
    Authentication 528
    Identities 530
    The Security Call Context 532
    Impersonation 534
    Authorization 542
    Identity Management 548
    Callbacks 549
  Internet Application Scenario 550
    Securing the Internet Bindings 550
    Message Protection 554
| Authentication | 559 |
| Using Windows Credentials | 560 |
| Using the ASP.NET Providers | 562 |
| Identity Management | 571 |
| Callbacks | 571 |

**Business-to-Business Application Scenario**

| Securing the Business-to-Business Bindings | 572 |
| Authentication | 573 |
| Authorization | 576 |
| Identity Management | 577 |
| Callbacks | 578 |
| Host Security Configuration | 578 |

**Anonymous Application Scenario**

| Securing the Anonymous Bindings | 578 |
| Authentication | 579 |
| Authorization | 579 |
| Identity Management | 580 |
| Callbacks | 580 |

**No Security Scenario**

| Unsecuring the Bindings | 580 |
| Authentication | 581 |
| Authorization | 581 |
| Identity Management | 581 |
| Callbacks | 582 |

**Scenarios Summary**

| Declarative Security Framework | 582 |
| The SecurityBehaviorAttribute | 583 |
| Host-Side Declarative Security | 591 |
| Client-Side Declarative Security | 593 |

**Security Auditing**

| Configuring Security Audits | 600 |
| Declarative Security Auditing | 603 |
A. Introduction to Service-Orientation ........................................... 605
B. Headers and Contexts .............................................................. 620
C. Publish-Subscribe Service ....................................................... 643
D. Code-Access Security ............................................................... 663
E. Generic Interceptor ................................................................. 693
F. WCF Coding Standard ............................................................. 709
G. ServiceModelEx Catalog ......................................................... 720
Index ......................................................................................... 731
