Chapters marked with * may form the matter of a basic introductory course

Part I  Stellar Equilibrium With and Without Rotation

1  The Mechanical Equilibrium of Stars* .............................................. 3
   1.1  Momentum and Continuity Equations ................................. 3
   1.1.1  Hydrodynamical Equations ............................................. 3
   1.1.2  Hydrostatic Equilibrium .................................................. 5
   1.1.3  Mass Conservation and Continuity Equation ......................... 5
   1.1.4  Lagrangian and Eulerian Variables ...................................... 6
   1.1.5  Estimates of Pressure, Temperature and Timescales .............. 7
   1.2  The Potential Energy ............................................................ 10
   1.2.1  Relation to the Potential and Poisson Equation .................... 11
   1.2.2  The Potential Energy as a Function of Pressure .................... 12
   1.2.3  The Internal Stellar Temperature ....................................... 13
   1.3  The Virial Theorem for Stars .................................................. 13
   1.3.1  Star with Perfect Gas Law ............................................... 14
   1.3.2  Star with a General Equation of State .............................. 16
   1.3.3  Slow Contraction, the Kelvin–Helmholtz Timescale ............... 17

2  The Mechanical Equilibrium of Rotating Stars ................................... 19
   2.1  Equilibrium Configurations .................................................... 19
   2.1.1  From Maclaurin Spheroids to the Roche Models ................... 19
   2.1.2  Hydrostatic Equilibrium for Solid Body Rotation ................. 20
   2.1.3  Stellar Surface and Gravity .............................................. 22
   2.1.4  Critical Velocities ............................................................ 24
   2.1.5  Polar Radius as a Function of Rotation ............................... 27
   2.2  Equations of Stellar Structure for Shellular Rotation .............. 29
   2.2.1  Properties of the Isobars .................................................. 30
   2.2.2  Hydrostatic Equilibrium .................................................... 31
   2.2.3  Continuity Equation .......................................................... 32
   2.2.4  Equation of the Surface for Shellular Rotation ..................... 33
3 The Energetic Equilibrium of Stars

3.1 The Radiative Transfer
3.1.1 Equation of Radiative Transfer
3.1.2 Radiation Properties in Stellar Interiors
3.1.3 Transfer Equation
3.1.4 The Rosseland Mean Opacity
3.1.5 The Mass–Luminosity Relation
3.1.6 Photon Travel Times and $M–L$ Relation

3.2 Energetic Equilibrium of a Star
3.2.1 Why Are Stars Stable Nuclear Reactors?
3.2.2 Energy Conservation
3.2.3 Combined Equation of Conservation and Transfer
3.2.4 Relation with the Heat Conduction

3.3 Energy Generation Rate from Gravitational Contraction.
3.3.1 Contraction of a Star with Perfect Gas
3.3.2 Case of a General Equation of State
3.3.3 The Entropy of Mixing
3.3.4 The Difference of Specific Heats
3.3.5 Adiabatic Gradient for Constant $\mu$
3.3.6 Adiabatic Gradient for Variable $\mu$

3.4 Changes of $T$ and $\rho$ for Non-adiabatic Contraction
3.4.1 Major Consequences for Evolution

3.5 Secular Stability of Nuclear Burning
3.5.1 Shell Source Instability

3.6 The Role of Radiation Pressure in Stars
3.6.1 The Radiative Pressure as a Function of Mass
3.6.2 The Eddington Luminosity

4 The Energy Conservation and Radiative Equilibrium in Rotating Stars

4.1 Radiative Equilibrium for Rotating Stars
4.1.1 The Equation of Radiative Transfer
4.1.2 Conservation of Energy
4.1.3 Structure Equations for Rotating Stars

4.2 Radiative Transfer in Rotating Stars
4.2.1 Breakdown of Radiative Equilibrium
4.2.2 The Von Zeipel Theorem
4.2.3 Interferometric Observations of Stellar Distortion and Gravity Darkening

4.3 Interactions of Rotation and Radiation Effects
4.3.1 The $\Gamma$, $\Omega$ and $\Omega\Gamma$ Limits
4.3.2 The $\Omega\Gamma$ Limit: Combined Eddington and Rotation Limits

4.4 Critical Rotation Velocities
4.4.1 No Break-up Velocity for Differential Rotation?
5 Stellar Convection

5.1 Gravity Waves and the Brunt–Väisälä Frequency

5.1.1 Relation with the Entropy Gradient

5.1.2 The Schwarzschild and Ledoux Criteria

5.1.3 The Four $T$ Gradients

5.2 Mixing-Length Theory for the Convective Flux

5.2.1 Orders of Magnitude

5.3 Convection in Stellar Interiors

5.4 Non-adiabatic Convection

5.4.1 Radiative Losses

5.4.2 Thermal Adjustment Timescale

5.4.3 Solutions for Non-adiabatic Convection

5.4.4 Limiting Cases, Fraction Carried by Convection

5.5 Convection in the Most Luminous Stars

5.5.1 Convection Near the Eddington Limit

5.5.2 Density Inversion

5.5.3 Pressure and Flux of Turbulence

6 Overshoot, Semiconvection, Thermohaline Convection, Rotation and Solberg–Hoiland Criterion

6.1 Convective Overshooting

6.1.1 Overshooting in an MLT Non-local Model

6.1.2 The Roxburgh Criterion for Convective Overshoot

6.1.3 Turbulence Modeling and Overshooting

6.1.4 Observational Constraints

6.2 Semiconvection and Thermohaline Convection

6.2.1 Various Approaches

6.2.2 Kato Equation, Thermohaline Convection

6.2.3 Diffusion Coefficient for Semiconvection

6.3 Time-Dependent Convection

6.4 Effects of Rotation on Convection

6.4.1 Oscillation Frequency in a Rotating Medium

6.4.2 The Rayleigh Criterion and Rayleigh–Taylor Instability

6.4.3 The Solberg–Hoiland Criterion

6.4.4 Numerical Simulations

6.5 Convective Envelope in Rotating O-stars
## Part II  Physical Properties of Stellar Matter

### 7  The Equation of State∗

7.1  Excitation and Ionization of Gases .......................... 137

#### 7.1.1  Excitation ........................................ 137

7.1.2  Ionization of Gases: The Saha Equation ................. 139

#### 7.1.3  The Saha–Boltzmann Equation ........................ 140

7.1.4  Ionization Potentials and Negative Ions ................. 142

7.2  Perfect Gas and Mean Molecular Weights .................. 143

7.3  Partially Ionized Stellar Medium ........................... 145

7.3.1  Coupled Equations for a Medium Partially Ionized ..... 146

#### 7.3.2  Thermodynamic Coefficients for Partial Ionization .... 148

7.4  Adiabatic Exponents and Thermodynamic Functions ...... 149

7.4.1  Definitions of the Adiabatic Exponents .................... 149

7.4.2  Relation Between the $\Gamma_i$ and Specific Heats ........ 151

7.5  Thermodynamics of Mixture of Gas and Radiation ......... 153

7.6  Electrostatic Effects ..................................... 156

7.6.1  The Debye–Hückel Radius ................................ 156

7.6.2  Electrostatic Effects on the Gas Pressure .................. 158

7.6.3  Ionization by Pressure .................................. 159

7.6.4  Crystallization .......................................... 160

7.7  Degenerate Gases ........................................ 161

7.7.1  Partially Degenerate Gas .................................. 164

7.7.2  Non-Relativistic Partial Degeneracy ....................... 164

7.7.3  Completely Degenerate Gas .............................. 166

7.7.4  Electrostatic Effects in a Degenerate Medium .......... 169

7.7.5  A Note on the Consequences ofDegeneracyand on White Dwarfs ........................................ 170

7.8  Global View on the Equation of State ...................... 172

### 8  The Opacities∗

8.1  Line Absorption, Electron Scattering, Rayleigh Diffusion .... 177

8.1.1  Recalls on the Atomic Oscillators ......................... 177

8.1.2  Spectral Lines or Bound–Bound Transitions ............... 178

8.2  Electron Scattering ....................................... 179

8.2.1  Electron Scattering at High Energies ...................... 180

8.2.2  Rayleigh Diffusion ...................................... 181

8.3  Photoionization or Bound–Free Transitions ................. 181

8.3.1  Negative H Absorption .................................. 183

8.4  Hyperbolic Transitions or Free–Free Opacity ................ 185

8.5  Electronic Conduction ..................................... 186

8.5.1  Electron Conduction in Non-degenerate Gas ............. 186

8.5.2  Electron Conduction in Degenerate Gas .................. 188

8.6  Global View on Stellar Opacities .......................... 189

8.6.1  Dependence on $T$ and $\varphi$, Changes with Masses .... 189

8.6.2  Opacity Tables ........................................... 191
9 Nuclear Reactions and Neutrino Processes

9.1 Physics of the Nuclear Reactions

9.1.1 Reaction Energy

9.2 Nuclear Reaction Rates

9.2.1 Particle Lifetimes and Energy Production Rates

9.3 Nuclear Cross-Sections

9.3.1 The Rate of Non-resonant Reactions

9.3.2 The Rate of Resonant Nuclear Reactions

9.4 Electron Screening

9.5 Neutrino Emission Processes

9.5.1 Photo-neutrinos

9.5.2 Pair Annihilation Neutrinos

9.5.3 Plasma, Bremsstrahlung, Recombination Neutrinos

Part III Hydrodynamical Instabilities and Transport Processes

10 Transport Processes: Diffusion and Advection

10.1 General Properties of Diffusion

10.1.1 Absence of Global Mass Flux

10.1.2 Continuity Equation: Atomic Diffusion and Motion

10.1.3 Fluxes of Particles, Velocities and Diffusion Coefficient

10.2 Diffusion by an Abundance Gradient

10.2.1 Equation of Diffusion

10.2.2 Boundary Conditions and Interpolations

10.2.3 Caution About the Use of Concentrations

10.3 Microscopic or Atomic Diffusion

10.3.1 Gravitational Settling

10.3.2 Equations of Motion of Charged Particles

10.3.3 The Electric Field and the Diffusion Velocities

10.3.4 Diffusion Equation

10.3.5 Effect of a Thermal Gradient

10.4 The Radiative Diffusion

10.4.1 Radiative Acceleration

10.4.2 Acceleration by Spectral Lines

10.4.3 Continuum Absorption, Redistribution, Magnetic Field

10.4.4 Orders of Magnitude, Diffusion in A Stars

10.4.5 Atomic Diffusion in the Sun

10.5 Transport of Angular Momentum in Stars

10.5.1 Equation of Transport

10.5.2 Transport of Angular Momentum by Shears

10.5.3 Some Properties of Shellular Rotation

10.5.4 Transport in Shellular Rotation

10.5.5 Boundary Conditions

The Pre-main Sequence Phase and the Birthlines

20.1 General Properties of Non-adiabatic Contraction
20.1.1 The Kelvin–Helmholtz Timescale
20.2 Pre-MS Evolution at Constant Mass
20.2.1 The Hayashi Line
20.2.2 Gravitational Energy Production and D Burning
20.2.3 From the Hayashi Line to the ZAMS
20.3 Pre-MS Evolution with Mass Accretion
20.3.1 The Birthline and Its Timescales
20.3.2 The Luminosity from D Burning
20.4 Evolution on the Birthline
20.5 Evolution from the Birthline to the ZAMS
20.6 Lifetimes, Ages and Isochrones
20.7 Lithium Depletion in Pre-MS Stars
20.7.1 Model Predictions
20.7.2 Li and D in T Tauri Stars and Residual Accretion
20.7.3 Li Depletion in Low-Mass Stars and Brown Dwarfs
20.7.4 Li Dating from Brown Dwarfs and Low-M Stars

Rotation in Star Formation

21.1 Steps in the Loss of Angular Momentum
21.1.1 From Interstellar Clouds to T Tauri Stars
21.1.2 From T Tauri Stars to the ZAMS
21.1.3 End of Pre-MS Phase and Early Main Sequence
21.2 Disk Locking and Magnetospheric Accretion
21.2.1 Observational Evidences
21.3 Magnetic Braking and Rotation in Clusters
21.3.1 Predicted Magnetic Braking
21.3.2 Comparisons with Rotation Velocities in Clusters

The Formation of Massive Stars

22.1 The Various Scenarios for Massive Star Formation
22.1.1 The Classical or Constant Mass Scenario
22.1.2 The Collision or Coalescence Scenario
22.1.3 The Accretion Scenario
22.2 Timescales for Accreting Stars
22.3 Limits on the Accretion Rates
22.3.1 The Upper Limit on Accretion
22.3.2 Conditions on Dust Opacity
22.3.3 The Lower Limit on Accretion Rates
22.3.4 The Role of Rotation
22.4 Accretion Models for Massive Star Formation
22.4.1 Formation with Initially Peaked Accretion
22.4.2 The Churchwell–Henning Relation

23.4 The HR Diagram of Accreting Stars at $Z = 0$ ............. 581
  23.4.1 The Case of Non-zero Metallicities .................. 581
  23.4.2 The Role of Rotation .............................. 582
23.5 The Upper Mass Limit at $Z = 0$ .......................... 582
  23.5.1 Main Effects ...................................... 583
  23.5.2 HII Region in a Free-Falling Envelope ............... 583
  23.5.3 Radiation Effect on an HII Region ................... 585
23.6 The Pop. II.5 Stars ..................................... 587
  23.6.1 HD Formation and Gas Cooling ...................... 587
  23.6.2 The Masses of the Pop. II.5 Stars .................... 588

Part VI Main-Sequence and Post-MS Evolution

24 Solutions of the Equations and Simple Models* ............. 593
  24.1 Hydrostatic and Hydrodynamic Models .................. 593
    24.1.1 Hydrostatic Models and Vogt–Russel Theorem ....... 593
    24.1.2 Hydrodynamic Equations .......................... 595
    24.1.3 Boundary Conditions at the Center and Surface .... 596
    24.1.4 Analytical Solutions in the Outer Layers .......... 597
  24.2 The Henyey Method .................................... 599
  24.3 Homology Transformations: Relations $M–L–R$ ............ 601
    24.3.1 Other Effects: Electron Scattering, $P_{rad}$, Convection 604
  24.4 The Helium and Generalized Main Sequences ............... 605
    24.4.1 The Helium Sequence ................................ 605
    24.4.2 Generalized Main Sequences ....................... 605
  24.5 Polytropic Models .................................... 607
    24.5.1 Interesting Polytropes ............................ 609
    24.5.2 Isothermal Sphere ............................... 610

25 Evolution in the H-Burning Phases* ............................ 613
  25.1 Hydrogen Burning .................................... 613
    25.1.1 The pp Chains ................................... 614
    25.1.2 Equations for Composition Changes ................ 615
    25.1.3 The CNO Cycles .................................. 618
    25.1.4 Energy Production in MS Stars ..................... 620
    25.1.5 The NeNa and MgAl Cycles ....................... 621
25.2 Basic Properties of MS Stars ................................. 624
  25.2.1 Differences in Structure ................................. 624
  25.2.2 Main Parameters as a Function of Mass .......... 625
  25.2.3 Evolutionary Timescales ............................... 627
25.3 Solar Properties and Evolution .............................. 629
  25.3.1 Internal Structure .................................. 629
  25.3.2 The Evolution of the Sun ............................. 632
  25.3.3 Solar Neutrinos ............................. 634
25.4 Evolution on the Main Sequence ............................. 637
  25.4.1 Internal Properties, Tracks in the HR Diagram ....... 637
25.5 The End of the Main Sequence ............................... 640
  25.5.1 The Schönberg–Chandrasekhar Limit ................ 640
  25.5.2 Isochrones and Age Determinations .............. 642
26 Evolution in the He Burning and AGB Phases of Low and Intermediate Mass Stars with Rotation* ............. 645
  26.1 Helium Burning ........................................ 645
  26.2 He Burning in Intermediate Mass Stars ................. 647
    26.2.1 From Main Sequence to Red Giants ............... 647
    26.2.2 Evolution in the He-Burning Phase and Dredge-up .... 651
    26.2.3 From AGB to the White Dwarfs ................... 654
    26.2.4 The Blue Loops ................................ 656
  26.3 Some Metallicity Effects in Evolution ................... 657
  26.4 Central Evolution and Domains of Stellar Masses ........ 658
    26.4.1 The Mass Limits for Evolution .................... 661
    26.4.2 Evolution of the Entropy per Baryon .......... 664
  26.5 The Horizontal Branch .................................. 665
  26.6 Evolution and Nucleosynthesis in AGB Stars .......... 667
    26.6.1 Structure and Instability of TP-AGB Stars ...... 667
    26.6.2 Third Dredge-Up and TP-AGB Nucleosynthesis ...... 671
    26.6.3 AGB Classification and Chemical Abundances .... 674
    26.6.4 Post-AGB Stars to Planetary Nebulae and White Dwarfs, Super-AGB Stars ................................... 676
  26.7 Rotation and Mixing Effects in AGB stars ............... 678
  26.8 Nucleosynthesis in AGB Stars ........................... 681
    26.8.1 Nucleosynthesis in E-AGB stars ................... 681
    26.8.2 Nucleosynthesis in TP-AGB Stars ............... 683
27 Massive Star Evolution with Mass Loss and Rotation* ...... 685
  27.1 The Need for Both ...................................... 685
  27.2 Evolution at Constant Mass ............................... 686
  27.3 Internal Evolution and the HR Diagram ............... 688
    27.3.1 Mass Loss Parametrizations ....................... 688
    27.3.2 Mass Loss Effects in the HR Diagram .......... 690
    27.3.3 Internal Evolution with Mass Loss .......... 692
### 27.3.4 Effects of Rotation in the MS Phase .......................... 693
### 27.3.5 Lifetimes and Age Estimates .............................. 694
### 27.3.6 He-Burning: Blue and Red Supergiants at Different Z ... 696

### 27.4 Evolution of the Chemical Abundances ....................... 697
### 27.4.1 Steps in the Peeling-Off by Mass Loss .................... 697
### 27.4.2 Observed N/H Excesses .................................. 699
### 27.4.3 Chemistry in Models with Rotation ........................ 700
### 27.4.4 Abundances and Massive Star Filiations ................... 702

### 27.5 Wolf–Rayet Stars: the Daughters of O stars .................. 703
### 27.5.1 WR Properties: the Zebras in the Zoo .................... 703
### 27.5.2 Optically Thick Winds. M–L–R–T_eff Relations ............. 703

### 27.6 WR Star Chemistry ........................................... 706
### 27.6.1 Observations ........................................... 706
### 27.6.2 Mass Loss, Rotation and WR Chemistry ..................... 707
### 27.6.3 22Ne in WC Stars ........................................... 709

### 27.7 Number Ratios of WR Stars in Galaxies ....................... 710
### 27.7.1 Observed Number Ratios .................................. 710
### 27.7.2 Models with Mass Loss and Rotation ........................ 711

### 27.8 Evolution of the Rotational Velocities ........................ 713
### 27.8.1 Rotation of LBV ........................................... 715
### 27.8.2 WR Star Rotation ........................................... 716

### 28 Advanced Evolutionary Stages and Pre-supernovae*

#### 28.1 Nuclear Reactions in the Advanced Phases .................... 719
### 28.1.1 C Burning .............................................. 719
### 28.1.2 Ne Photodisintegration .................................... 723
### 28.1.3 O Burning .............................................. 723
### 28.1.4 Silicon Burning ........................................... 724

#### 28.2 The Advanced Phases with and Without Rotation ............. 725
### 28.2.1 Toward the “Onion Skin” Model .............................. 726
### 28.2.2 Decoupling of Core and Envelope ............................ 727
### 28.2.3 Evolution of Central Conditions ............................ 727
### 28.2.4 Lifetimes and Core Masses, Rotation ........................ 729

#### 28.3 Chemical Yields: Z, Mass Loss and Rotation Effects ........ 731
### 28.3.1 Chemical Yields of \( \alpha \)-Rich Nuclei .................... 732

#### 28.4 Toward the Supernovae ....................................... 734
### 28.4.1 Supernova Types .......................................... 734
### 28.4.2 Core Collapse and Explosion ................................ 736
### 28.4.3 Final Masses and Remnants ................................ 738

#### 28.5 Explosive Synthesis .......................................... 741
### 28.5.1 Elements with A < 56 ..................................... 741
### 28.5.2 The Fe Peak .............................................. 743
### 28.5.3 The Heavy Elements A \( \geq \) 60 ............................ 745
### 28.5.4 The s-Elements ............................................ 746
### 28.5.5 The r-Elements ............................................ 747
