The graph shows the comparison of data to theory for the CMS Preliminary analysis with 5.43 pb⁻¹ (2.76 TeV) of integrated luminosity. The x-axis represents the jet pseudorapidity (|y| < 0.5), while the y-axis represents the ratio of data to theory. The yellow shaded area indicates the theoretical prediction for CT10 NLO × NP. The error bars on the data points indicate the statistical uncertainty. The CMS logo is present at the top left corner of the graph.
