The CMS Preliminary result shows the ratio of data to CT10 for jet $p_T$ distribution, with $2.5 < |y| < 3.0$ for anti-$k_T$ ($R = 0.7$) jets. The graph compares the total experiment uncertainty, CT10 theoretical uncertainty, and predictions from various PDF sets (HERAPDF1.5, MSTW2008, NNPDF2.1, ABM11, NNPDF3.0). The CMS preliminary data at $19.7 fb^{-1}$ (8TeV) is presented.
