The CMS Preliminary result with 35.9 fb$^{-1}$ (13 TeV) of data shows the ratio of $\Delta\sigma/\Delta p_T^H$ (pb/GeV) as a function of $p_T^H$ (GeV). The ratios are shown for $\Delta\sigma(p_T^H > 600) / 250$, $\Delta\sigma(p_T^H > 200) / 120$, and $\Delta\sigma(p_T^H > 600) / 250$. The systematic uncertainties are also shown as shaded areas. The figure includes data points for $H\rightarrow bb$, $H\rightarrow \gamma\gamma$, and $H\rightarrow ZZ$ with aMC@NLO, NNLOPS predictions. The SM cross-section is from DOI: 10.23731/CYRM-2017-002.
